• *As-Built Description:*

6 Running slope of existing perpendicular curb ramp is less than 5% or greater than 8.3%.

• *As-is* 10.4%

• *Proposed Solution:*

7 Demolish existing and provide new, perpendicular curb ramp, including detectable warning surfaces, and top and bottom landings as required.

1. **Orientation:** Corresponds to the specifi corner/curb ramp in any given intersection, unique to each corner/curb ramp (in some cases there is more than one curb ramp per corner, or no curb ramp):
2. **Locator Number:** Corresponds to a unique database record tied to the specifi curb ramp which can be crossreferenced across this database and its corresponding GIS database.
   - NW, SW, SE, and NE are the most commonly used directions;
   - NNE, ENE, ESE, SSE, SSW, WSW, WNW, and NNW identify individual curb ramps in situations involving multiple curbs ramps at one corner.
3. **Ramp Type:** Identifie the type of curb ramp (parallel, perpendicular, curb ramp required, etc.).
4. **Specific Item** Category of accessible feature in which the barrier belongs.
5. **Survey Street:** Survey street name.
6. **Field Condition:** Description of as-built barrier based on applicable accessibility codes.
7. **Measurement:** Existing condition/dimension featured on the ramp measured as the most severe barrier on the particular ramp.
8. **Proposed Solution:** Description of steps necessary to remove barrier and, if applicable, an interim solution or notes.
9. **Cross Street:** Cross/intersecting street name.
10. **Codes / Info:**
    - PROWAG: Guidelines to enforce Federal accessibility standards in the public rights-of-way.
    - ADAAG/ADA 2010: The Federal Standard for accessibility adopted by the Department of Justice.
    - CBC 2007/ CBC 2019 The California Building Codes.
11. **Unit Cost:** Estimated cost specifi solution per one unit. (The fina cost of barrier removal may exceed this estimate based on the year of mitigation, design approach and chosen method of mitigation)
12. **Priority:** Priority number assigned to specifi barrier based on priorization criteria which include: expected frequency of use and severity of the barrier. Measureed on a scale of 0 to 200, with 200 being the highest priority and 0 being the least.
13. **Ramp Features:** Features of curb ramp measured to determine accessibility.
14. **Measurements:** Existing condition/dimension determined for each ramp.
    - (in) measurement in inches
    - (%) measurement in percentage grade
    - **BOLD** text indicate non-compliant dimensions.
    - Normal text indicate compliant dimensions

MEASUREMENT BREAKDOWN

FEATURE:	ADA/CBC GUIDELINE
Street Grade	*Used for reference in regards to possible exceptions*
Width of Ramp	The clear width of curb ramp runs (excluding any flare sides), blended transitions, and turning spaces shall be 48 inches minimum.
Slope of the Ramp	Ramp runs shall have a running slope not steeper than 1:12 (8.3%).
X Slope of the Ramp	The cross slope of curb ramps and blended transitions shall be 1:48 (2.0%) maximum.
Top Landing Length	Landings shall be provided at the tops of curb ramps and blended transitions. The landing clear length shall be 48 inches minimum.
Top Landing Slope	The slope of the landing in all directions shall be 1:48 (2.0%) maximum.
Top Landing X Slope	The slope of the landing in all directions shall be 1:48 (2.0%) maximum.
Bottom Landing Length	(Parallel Curb Ramp) A turning space 48 inches minimum by 48 inches minimum shall be provided at the bottom of the curb ramp.
Bottom Landing Slope	(Parallel Curb Ramp) The slope of the turning space in all directions shall be 1:48 (2.0%) maximum.
Bottom Landing X Slope	(Parallel Curb Ramp) The slope of the turning space in all directions shall be 1:48 (2.0%) maximum.
Left Flare	Where provided, curb ramp flare shall not be steeper than 1:10 (10.0%).
Right Flare	Where provided, curb ramp flare shall not be steeper than 1:10 (10.0%).
Gutter Lip	The adjacent surfaces at transitions at curb ramps to walks, gutters, and streets shall be at the same level.
Gutter Slope	Counter slopes of adjoining gutters and road surfaces immediately adjacent to and within 24 inches of the curb ramp shall not be steeper than 1:20 (5.0%).
Gutter X Slope	The cross slope of curb ramps and blended transitions shall be 1:48 (2.0%) maximum.
Truncated Domes	Curb ramps and blended transitions shall have detectable warnings.
Dome Setback	Detectable warnings shall be located so the edge nearest the curb is 6 inches minimum and 8 inches maximum from the line at the face of the curb marking the transition between the curb and the gutter, street or highway or flus at the transition for a paralell curb ramp and island cut-through.
Within Crosswalk	The bottom of curb ramps shall have a clear space 48 inches minimum outside active traffic lanes of the roadway

4334 Ramp Slope

- *As-Built Description:*

Running slope of existing perpendicular curb ramp is less than 5% or greater than 8.3%.

- *As-is* 10.4%
- *Proposed Solution:*

Demolish existing and provide new, perpendicular curb ramp, including detectable warning surfaces, and top and bottom landings as required.

3350 Gutter

- *As-Built Description:*

The slope of the gutter area or street at the foot of a curb ramp or blended transition exceeds 1:20 (5%) in the direction of the pedestrian crossing.

- *As-is* 9.1%
- *Proposed Solution:*

Demolish gutter or street area as required and provide 48" x 48" area at foot of curb ramp or blended transition with slope no greater than 5%.
