# Chapter 1 Introduction

The City of Madera has prepared this Initial Study/Negative Declaration (IS/ND) on behalf of Lion Builders, Inc. to address the environmental effects of the Country Club Commercial Center (Project). This document has been prepared in accordance with the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et.seq. The City of Madera is the CEQA lead agency for this proposed Project.

The site and the proposed Project are described in detail in the Project Description.

## 1.1 Regulatory Information

An Initial Study (IS) is a document prepared by a lead agency to determine whether a project may have a significant effect on the environment. In accordance with California Code of Regulations Title 14 (Chapter 3, Section 15000, *et seq.*)-- also known as the CEQA Guidelines-- Section 15064 (a)(1) states that an environmental impact report (EIR) must be prepared if there is substantial evidence in light of the whole record that the proposed Project under review may have a significant effect on the environment and should be further analyzed to determine mitigation measures or project alternatives that might avoid or reduce project impacts to less than significant levels. A negative declaration (ND) may be prepared instead if the lead agency finds that there is *no substantial* evidence in light of the whole record that the project may have a significant effect on the environment. A ND is a written statement describing the reasons why a proposed Project, not otherwise exempt from CEQA, would not have a significant effect on the environment and, therefore, why it would not require the preparation of an EIR (CEQA Guidelines Section 15371). According to CEQA Guidelines Section 15070, a ND or *mitigated* ND shall be prepared for a project subject to CEQA when either:

- a. The IS shows there is no substantial evidence, in light of the whole record before the agency, that the proposed Project may have a significant effect on the environment, or
- b. The IS identified potentially significant effects, but:
  - 1. Revisions in the project plans or proposals made by or agreed to by the applicant before the proposed MND and IS released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur is prepared, and
  - 2. There is no substantial evidence, in light of the whole record before the agency, that the proposed Project as revised may have a significant effect on the environment.

### 1.2 Document Format

This IS/ND contains four chapters plus appendices. Introduction, provides an overview of the proposed Project and the CEQA process. Project Description, provides a detailed description of proposed Project components. Determination identifies the environmental factors potentially affected based on the analyses contained in this IS and includes with the Lead Agency's determination based upon those analyses. Impact Analysis presents the CEQA checklist and environmental analyses for all impact areas and the mandatory findings of significance. A brief discussion of the reasons why the project impact is anticipated to be less than significant or why no impacts are expected is included. The California Emissions Estimator Model (CalEEMod) Output Files are provided as technical Appendix A at the end of this document. The traffic impact analysis prepared is provided in Appendix B as well.

# Chapter 2 Project Description

### 2.1 Project Background

### 2.1.1 Project Title

Country Club Commercial Center Site Plan Review (SPR) 2019-25 Conditional Use Permit (CUP) 2019-19, 20 & 2021-02

### 2.1.2 Lead Agency Name and Address

City of Madera 205 W. 4<sup>th</sup> Street Madera, CA 93637

### 2.1.3 Contact Person and Phone Number

#### Lead Agency Contact

Derek Sylvester, Associate Planner 559.661.5436

### 2.1.4 Project Location

The proposed site of the Country Club Commercial Center is located on the Southeast corner of Country Club Drive and Adell Street, on Assessor's Parcel Number (APN) 003-250-026. The centroid of the Project area is 36° 58' 57.2" N, 120° 04' 24.2" W

### 2.1.5 General Plan Land Use and Zoning

The Project site is planned C (Commercial) and is zoned C-1 (Light Commercial).

### 2.1.6 Description of Project

#### **Project Description**

Lion Builders, Inc. (Applicant), proposes construction of a 4,000 square foot convenience store with alcohol and tobacco sales along with 12 multi-product fuel dispensers under a canopy. In addition, proposed on site would be a 5,800 square foot retail pad of which 2,200 square feet is identified as a coffee shop with a drive through window. The remaining 3,600 square feet is identified as future retail space. Total building coverage is approximately 21 percent of the Project site. Approximately 14,650 square feet (25 percent) of

the site would be landscaped. Approximately 56 percent of the Project site would be composed of pavement.

The proposed convenience store is anticipated to operate seven days a week, 24 hours a day and employ an estimated 10 to 15 employees over several shifts. Typical shifts will have 2 to 3 employees. The proposed retail building is also anticipated to operate seven days week between 9 a.m. to 11 p.m. and employ an estimated 25 to 35 employees over multiple shifts. Typical shifts will have 4 to 6 employees.

The Project site is a 1.37-acre vacant lot located on the southeast corner of Country Club Drive and Adell Street. The proposed site improvements will provide for 43 parking spaces, four of which will be handicap accessible parking spaces. Access to the site will be from two proposed driveways along Adell Street and from Country Club Drive via an existing driveway south of the property currently providing access to Tractor Supply. The existing Country Club Drive driveway will be limited to right-in, right-out movements with the completion of the proposed project. Proposed Project improvements include extending an existing raised median in Country Club Drive northward to Adell Street.

### 2.1.7 Site and Surrounding Land Uses and Setting

#### **Environmental Setting**

The 1.37-acre Project site is vacant land both designated and zoned for commercial use. Vegetation on site totals roughly 900 square feet. The site elevation is approximately 272 feet above sea level. Soils present on the Project site consist of clay and sandy loam which are moderate to poorly drained and have a "very high" runoff classification according to the United States Department of Agriculture, Natural Resources Conservation Service.

#### Surrounding Land Uses

The Project site is located directly north of an existing commercial development, Tractor Supply Company located at 1565 Country Club Dr. (see Figure 2-1, Regional Location). The Project site is within the City of Madera and is identified as Madera County APN 003-250-026 (see Figure 2-2, Project Site).

The City of Madera city limits form the northern boundary of the Project site. Residential areas are located to the north and west of the Project site, with additional commercial uses to the west, and remaining areas undeveloped.

Direction from Project Site	Existing Use	General Plan Designation	Zone District
North (County)	Residential	Low Density Residential	Rural Agricultural
East	Vacant	Commercial	C-1 – Light Commercial
South	Commercial	Commercial	C-1 – Light Commercial
West	Commercial	Commercial	C-1 – Light Commercial

Table 2-1 Existing Uses, General Plan Designations, and Zone Districts of Surrounding Properties

### 2.1.8 Other Approvals Required

The City of Madera has jurisdiction over the review and approval of this project. The City of Madera Planning Commission will be requested to act on the following:

- Adoption of Negative Declaration (environmental determination based on IS)
- Approval of Site Plan Review and Conditional Use Permits for site development

Other agencies, including but not necessarily limited to the following, may have authority to issue permits prior to project implementation:

- San Joaquin Valley Air Pollution Control District
- Madera Irrigation District
- State of California Regional Water Quality Control Board

### 2.1.9 Consultation with California Native American Tribes (Assembly Bill 52 Compliance)

Public Resources Code Section 21080.3.1, *et seq. (codification of AB 52, 2013-14)*) requires that a lead agency, within 14 days of determining that it will undertake a project, must notify in writing any California Native American Tribe traditionally and culturally affiliated with the geographic area of the project if that Tribe has previously requested notification about projects in that geographic area. The notice must briefly describe the project and inquire whether the Tribe wishes to initiate request formal consultation. Tribes have 30 days from receipt of notification to request formal consultation. The lead agency then has 30 days to initiate the consultation, which then continues until the parties come to an agreement regarding necessary mitigation or agree that no mitigation is needed, or one or both parties determine that negotiation occurred in good faith, but no agreement will be made.

The City of Madera has not received written correspondence from any California Native American tribes pursuant to Public Resources Code Section 21080.3.1 requesting notification of proposed projects.

# Chapter 3 Determination

### 3.1 Environmental Factors Potentially Affected

As indicated by the discussions of existing and baseline conditions, and impact analyses that follow in this Chapter, environmental factors not checked below would have no impacts or less than significant impacts resulting from the project. Environmental factors that are checked below would have potentially significant impacts resulting from the project. Mitigation measures are recommended for each of the potentially significant impacts that would reduce the impact to less than significant.

Aesthetics	Agriculture & Forestry Resources	Air Quality
Biological Resources	Cultural Resources	Energy
Geology/Soils	Greenhouse Gas Emissions	🔲 Hazards & Hazardous Materials
Hydrology/Water Quality	Land Use/Planning	Mineral Resources
Noise	Population/Housing	Public Services
Recreation	Transportation	Tribal Cultural Resources
Utilities/Service Systems	Wildfire	Mandatory Findings of Significance

The analyses of environmental impacts in **Chapter 4 Impact Analysis** result in an impact statement, which shall have the following meanings.

**Potentially Significant Impact**. This category is applicable if there is substantial evidence that an effect may be significant, and no feasible mitigation measures can be identified to reduce impacts to a less than significant level. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

**Less than Significant with Mitigation Incorporated.** This category applies where the incorporation of mitigation measures would reduce an effect from a "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measure(s), and briefly explain how they would reduce the effect to a less than significant level (mitigation measures from earlier analyses may be cross-referenced).

Less Than Significant Impact. This category is identified when the proposed Project would result in impacts below the threshold of significance, and no mitigation measures are required.

**No Impact.** This category applies when a project would not create an impact in the specific environmental issue area. "No Impact" answers do not require a detailed explanation if they are adequately supported by the information sources cited by the lead agency, which show that the impact does not apply to the specific project (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

### 3.2 Determination

On the basis of this initial evaluation (to be completed by the Lead Agency):

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

# Chapter 4 Impact Analysis

### 4.1 Aesthetics

Except as provided in Public Resources Code Section 21099, would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Have a substantial adverse effect on a scenic vista?</li> </ul>			$\boxtimes$	
<ul> <li>b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?</li> </ul>				
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?				
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?				

### 4.1.1 Impact Assessment

#### a) Would the project have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. The project is not located near a scenic vista, nor does the project provide notable scenic values such as undisturbed open space, prominent landforms, or features. Possible impact and obstruction of views of the eastern mountain ranges seen from the San Joaquin Valley may occur. The project will not result in the obstruction of federal, state, or locally classified scenic areas, historic properties, community landmarks, or formally classified scenic resources, such as a scenic highway, national or state scenic area, or scenic vista. Therefore, there would be a *less than significant impact*.

## b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

**Less Than Significant Impact.** The Project is not located along a State-designated Scenic Highway.<sup>1</sup> The nearest officially designated scenic highway is State Route 180 east of the unincorporated community of Minkler in Fresno County which is approximately 40 miles southeast of the Project site. Furthermore, there are no notable trees, rock outcroppings, or historical buildings on the project that would be affected. The Project with the addition of buildings on the site could potentially limit views of the mountain ranges to the east on a clear day; however, this impact is not substantially damaging to scenic resources in the area. Therefore, the Project would have a *less than significant impact*.

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

**Less Than Significant Impact.** The development of the site will not substantially degrade the existing public views of the site. Presently, the site is accumulating litter due to being undeveloped and along busy streets. All views from publicly accessible vantage points, such as sidewalks and parking lots, will not be degraded. The Project proposes improvements to the site; therefore, this Project would have a *less than significant impact* on visual character.

## d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

**Less Than Significant Impact.** Development of a commercial center with windows and reflective surfaces could lead to an increase in glare and lighting sources. With new development, window glare and nighttime lighting of the gas station and convenience store could potentially effect traffic and neighboring residential homes to the north and west. However, implementation of City standards for minimizing these impacts will be incorporated. Therefore, the Project would have a *less than significant impact*.

<sup>&</sup>lt;sup>1</sup> California Department of Transportation website, State Scenic Highways, <u>https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways</u> accessed April 2021.

### 4.2 Agriculture and Forestry Resources

Would	the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non- agricultural use?				
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?				$\boxtimes$
c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				
d)	Result in the loss of forest land or conversion of forest land to non-forest use?				
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				

### 4.2.1 Impact Assessment

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

**No Impact.** The site is not agricultural in nature, nor identified as Farmland per the Farmland Mapping and Monitoring Program (FMMP)<sup>2</sup>. The Farmland Mapping and Monitoring Program identifies the project site as Vacant or Distributed Land. Therefore, there would be *no impact.* 

<sup>&</sup>lt;sup>2</sup> California Department of Conservation, California Important Farmland Finder, <u>https://gis.data.ca.gov/datasets/8ab78d6c403b402786cc231941d1b929</u> accessed April 2021.

## b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

**No Impact.** The Project is not agricultural land or subject to a Williamson Act contract, therefore the Project would have *no impact.* 

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

**No Impact.** The Project site and surrounding properties are not defined as forest land (as defined by Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)). Therefore, there would be *no impact*.

## d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

**No Impact.** The Project site does not contain forest land or located adjacent to land designated as forest land. *No impacts* would occur.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

**No Impact.** The Project will not involve changes to the existing environment which could result in the conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use. Therefore, *no impacts* would occur.

### 4.3 Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Conflict with or obstruct implementation of the applicable air quality plan?</li> </ul>			$\boxtimes$	
<ul> <li>Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?</li> </ul>				
c) Expose sensitive receptors to substantial pollutant concentrations?			$\square$	
<ul> <li>d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?</li> </ul>			$\square$	

### 4.3.1 Impact Assessment

#### Thresholds of Significance

To assist local jurisdictions in the evaluation of air quality impacts, the San Joaquin Valley Air Pollution Control District (SJVAPCD) has published the *Guide for Assessing and Mitigating Air Quality Impacts*. This guidance document includes recommended thresholds of significance to be used for the evaluation of short-term construction, long-term operational, odor, toxic air contaminant, and cumulative air quality impacts. Accordingly, the SJVAPCD-recommended thresholds of significance are used to determine whether implementation of a proposed project would result in a significant air quality impact. Projects that exceed these recommended thresholds would be considered to have a potentially significant impact to human health and welfare. The thresholds of significance are summarized, as follows:

**Short-Term Emissions of Particulate Matter (PM10):** Construction impacts associated with a proposed project would be considered significant if the feasible control measures for construction in compliance with Regulation VIII as listed in the SJVAPCD guidelines are not incorporated or implemented, or if project-generated emissions would exceed 15 tons per year (TPY).

**Short-Term Emissions of Ozone Precursors (ROG and NOX):** Construction impacts associated with a proposed project would be considered significant if the project generates emissions of Reactive Organic Gases (ROG) or oxides of nitrogen (NO<sub>X</sub>) that exceeds 10 TPY.

Long-Term Emissions of Particulate Matter (PM10): Operational impacts associated with a proposed project would be considered significant if the project generates emissions of suspended respirable particulate matter less than 10 microns in diameter ( $PM_{10}$ )that exceed 15 TPY.

**Long-Term Emissions of Ozone Precursors (ROG and NOX):** Operational impacts associated with a proposed Project would be considered significant if the project generates emissions of ROG or NO<sub>X</sub> that exceeds 10 TPY.

**Conflict with or Obstruct Implementation of Applicable Air Quality Plan:** Due to the region's nonattainment status for ozone, suspended respirable particulate matter less than 2.5 microns in diameter ( $PM_{2.5}$ ), and  $PM_{10}$ , if the project-generated emissions of either of the ozone precursor pollutants (i.e., ROG and NO<sub>x</sub>) or  $PM_{10}$  would exceed the SJVAPCD's significance thresholds, then the project would be considered to conflict with the attainment plans. In addition, if the project would result in a change in land use and corresponding increases in vehicle miles traveled, the project may result in an increase in vehicle miles traveled that is unaccounted for in regional emissions inventories contained in regional air quality control plans.

**Local Mobile-Source CO Concentrations:** Local mobile source impacts associated with the proposed Project would be considered significant if the project contributes to carbon monoxide (CO) concentrations at receptor locations in excess of the California Air Quality Standards (CAAQS) (i.e., 9.0 parts per million (ppm) for 8 hours or 20 ppm for 1 hour).

Exposure to toxic air contaminants (TACs) would be considered significant if the probability of contracting cancer for the Maximally Exposed Individual (i.e., maximum individual risk) would exceed 10 in 1 million or would result in a Hazard Index greater than 1.

Odor impacts associated with a proposed project would be considered significant if the project has the potential to frequently expose members of the public to objectionable odors.

**Rule 8011 General Requirements: Fugitive Dust Emission Sources.** Operations, including construction operations, must control fugitive dust emissions in accordance with SJVAPCD Regulation VIII. The SJVACPD requires the implementation of control measures for fugitive dust emissions. For projects in which construction-related activities would disturb equal to or greater than one (1) acre of surface area, the SJVAPCD recommends that demonstration of receipt of an SJVAPCD approved "Dust Control Plan" or "Construction Notification Form," before issuance of the first grading permit, be made a condition of approval.

**Rule 9510 Indirect Source Review.** This rule requires project applicants to reduce operational emission of NO<sub>x</sub> by 33 percent of the project's operational baseline and 50 percent of the project's operational suspended PM<sub>10</sub> emissions. Projects subject to SJVAPCD's District Rule 9510 are required to submit an Air Impact Assessment (AIA) application to the SJVAPCD no later than applying for final discretionary approval of a proposed project, and to pay any applicable off-site mitigation fees before issuance of the first building permit.

Air quality is determined by the type and amount (concentration) of contaminants emitted into the atmosphere, the size and topography of the San Joaquin Valley Basin (SJVAB), and its meteorological conditions. National and State air quality standards specify the upper limits of concentrations and duration in the ambient air for the following air pollutants: ozone (O<sub>3</sub>), CO, nitrogen dioxide (NO<sub>2</sub>), PM<sub>10</sub>, PM<sub>2.5</sub>, sulfur dioxide (SO<sub>2</sub>) and lead (Pb). These pollutants are commonly referred to as "criteria pollutants." The SJVAPCD also conducts monitoring for two other State standards: sulfates and visibility.

The SJVAPCD, together with the California Air Resources Board (CARB), maintains ambient air quality monitoring stations in the SJVAB. The air quality monitoring station closest to the Project site is the Madera

– 28261 Avenue 14 monitoring station. The pollutants monitored at this station are O<sub>3</sub>, PM <sub>2.5</sub>, and PM<sub>10</sub>. Air quality trends for CO, NO<sub>2</sub>, and SO<sub>2</sub> are not monitored at this air quality monitoring station. Madera County – Road 29½, north of Avenue 8 monitoring station monitors NO<sub>2</sub>. The nearest station monitoring CO and SO<sub>2</sub> is in Fresno – 3727 North First Street. The 2017 to 2019 monitoring results from these stations indicate the State 1-hour O<sub>3</sub> standard was exceeded 3 times in 2017, 2 times in 2018, and an unknown number of times 2019. Additionally, the State 8-hour O<sub>3</sub> standard was exceeded 29 times in 2017, 17 times in 2018, and unknown number of times in 2019. Furthermore, the federal 8-hour O<sub>3</sub> standard was exceeded 26 times in 2017, 14 times in 2018 and 10 times in 2019. The State PM<sub>10</sub> standard was exceeded 16 times in 2017 and 23 times in 2018. The CO, NO<sub>2</sub>, and SO<sub>2</sub> standards were not exceeded in this area during the 3-year period.<sup>3</sup>

The CARB is required to designate areas of the State as attainment, non-attainment, or unclassified for all State standards. An attainment designation for an area signifies that pollutant concentrations did not violate the standard for that pollutant in that area. A non-attainment designation indicates that a pollutant concentration violated that standard at least once, excluding those occasions when the violation was caused by an exceptional event, as defined in the criteria. An unclassified designation signifies that data does not support either an attainment or non-attainment status. The California Clean Air Act (CCAA) divides the air districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category. The United States Environmental Protection Agency (USEPA) also designates areas as attainment, non-attainment, or classified. The air quality data are also used to monitor progress in attaining air quality standards.

The CARB has designated the SJVAB as being a severe non-attainment for 1-hour O<sub>3</sub>, and non-attainment for 8-hour O<sub>3</sub>, PM<sub>10</sub>, and for PM<sub>2.5</sub>. The CARB has designated the Air Basin as attainment for NO<sub>2</sub>, SO<sub>2</sub>, Pb, and as an attainment / unclassified area for CO and all other air contaminants. The USEPA has designated the SJVAB as being an extreme non-attainment area for 8-hour O<sub>3</sub>, and non-attainment for PM<sub>2.5</sub>. USEPA has designated the SJVAB as attainment / unclassified for CO, NO<sub>2</sub>, SO<sub>2</sub> and no designation / classification for PM. There is no federal standard for 1-hour O<sub>3</sub>.<sup>4</sup>

There are no existing stationary sources that generate air quality emissions on the Project site.

Short-term and long-term emissions associated with the Project were calculated using CalEEMod, Version 2016.3.2 based on Project information available. Emissions modeling includes emissions generated by offroad equipment, haul trucks, and worker commute trips. Emissions were quantified based on default and standard construction scheduling practices. All remaining assumptions were based on the default parameters contained in the model. Modeling assumptions and output files are included in **Appendix A**.

### a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

**Less Than Significant Impact.** The Project site is located within the SJVAB. Air quality conditions in the SJVAB are regulated by the SJVAPCD. The region is classified as a State and Federal non-attainment area for  $PM_{10}$ , and  $O_3$ . Specific thresholds set by the SJVAPCD were compared to both construction and operations outputs as calculated in CalEEMod. The results of the model are detailed below in **Tables 4-1 and 4-2** and

<sup>&</sup>lt;sup>3</sup> CARB. iADAM Air Quality Statistics. <u>https://www.arb.ca.gov/adam</u> accessed April 2021.

<sup>&</sup>lt;sup>4</sup> CARB. Maps of State and Federal Area Designations. <u>https://ww2.arb.ca.gov/resources/documents/maps-state-and-federal-area-designations</u> accessed April 2021.

attached to this document as **Appendix A**, show that project implementation would not create significant impacts per SJVAPCD thresholds. Therefore, the project would have a *less than significant impact*.

# b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

**Less Than Significant Impact.** The proposed Project would not exceed established emission thresholds (see **Table 4-1** and **Table 4-2**); therefore, the Project will not conflict with or obstruct implementation of the applicable air quality plan. Because the construction emissions are short-term in nature and below the SJVAPCD thresholds, and operational emissions are significantly lower than the published thresholds, the Project would not generate enough emissions to create a cumulatively considerable impact relative to total emissions in the air basin as a whole. Therefore, there would be a *less than significant impact*.

#### Table 4-1: Unmitigated Short-term Construction-Generated Emissions of Criteria Air Pollutants

Source		Annual Emissions (Tons/Year)					
		NOx	CO	SO2	PM10	PM2.5	
Maximum Annual Proposed Project Emissions	0.1726	0.9776	0.8946	0.0017	0.0775	0.0563	
SJVAPCD Significance Thresholds	10	10	100	27	15	15	
Exceed Thresholds?	No	No	No	No	No	No	

Source	Annual Emissions (Tons/Year)					
Source		NOx	CO	SO2	PM10	PM2.5
Maximum Annual Proposed Project Emissions	0.9861	8.1140	6.1538	0.0230	1.0545	0.2979
SJVAPCD Significance Thresholds	10	10	100	27	15	15
Exceed Thresholds?	No	No	No	No	No	No

#### Table 4-2: Unmitigated Long-Term Operational Emissions of Criteria Air Pollutants

#### Table 4-3: Maximum Daily Unmitigated Emissions of Criteria Air Pollutants

Sourco	Daily Emissions (pounds)					
300100	ROG	NOx	CO	SO2	PM10	PM2.5
Construction – Summer	20.3699	17.4399	13.9601	0.0270	6.6312	3.6757
Construction – Winter	20.3685	17.4437	13.8804	0.0267	6.6312	3.6757
Operations – Summer	6.6924	44.6874	33.5018	0.1332	5.9642	1.6768
Operation – Winter	5.0802	44.2331	37.2349	0.1212	5.9703	1.6826
SJVAPCD Significance Thresholds	100	100	100	100	100	100
Exceed Thresholds?	No	No	No	No	No	No

#### c) Would the project expose sensitive receptors to substantial pollutant concentrations?

**Less Than Significant Impact.** The nearest sensitive receptors to the Project site are large lot rural singlefamily homes abutting the Project approximately 150 feet to the north. Sherman Thomas Charter School and Ezequiel Tafoya Alvarado Academy are approximately one-quarter mile east along Adell Street and north along Country Club Drive. Because of less than significant construction and operational emissions per SJVAPCD guidelines, and the distance of sensitive receptors from the Project site, a *less than significant impact* would occur.

## d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

**Less Than Significant Impact.** During construction activities, construction equipment exhaust and application of asphalt, structural coating and other construction applications would temporarily emit odors. However, construction and operation activities are not anticipated to generate substantial odors that would affect a substantial number of people and the proposed use is not of a nature generally considered to be a significant odor emitter. Therefore, the Project would result in a *less than significant impact*.

### 4.4 Biological Resources

Would	the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			$\square$	
b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?				
c)	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				$\boxtimes$
d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			$\boxtimes$	
e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				
f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				

### 4.4.1 Impact Assessment

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in

## local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

**No Impact.** The Project conforms to the City of Madera General Plan which included analysis of biological factors in the accompanying Environmental Impact Report (EIR). No threatened or endangered species in the Project area were identified in Figure 4.10-3 of the General Plan Draft EIR.<sup>5</sup> Impacts by this Project are not anticipated to exceed the impacts addressed in these documents; therefore, the Project would have *no impact.* 

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

**No Impact.** The Project site and its surroundings are absent of any riparian habitat or sensitive natural communities of special concern according to Figure 4.10-2 of the General Plan Draft EIR. The Project would not result in any direct or indirect impacts to riparian corridor, stream channel, or potentially viable habitat in which sensitive species could be found. Therefore, this Project would have **no impact**.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

**No Impact.** The Project site is void of any substantial vegetation and does not have the hydrology necessary to create wetlands. The General Plan Draft EIR designates the land as ruderal, which is roadside land disturbed by current and future development. Further, no wetlands have been reported or observed on site. Therefore, the proposed Project would have **no impact** on federally protected wetlands as defined by Section 404 of the Clean Water Act.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

**No Impact.** The Project site does not include any features such as a river, creek, stream, or other water course.<sup>6</sup> The Project site does not include a wildlife corridor as it is relatively developed and as such would be a deterrent to wildlife in the area. Therefore, the Project will have a *less than significant impact* on the movement of any native resident or migratory fish or wildlife species.

## e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

**No Impact.** The Project site and surrounding area are not within or subject to an adopted or proposed policy or ordinance protecting any biological resources. There exist a few shrubs on site, none of which are designated in local policies or ordinances as protected. The Project would not conflict with any local policies or ordinances protecting biological resources. Therefore, the Project will have *no impact* on protection of biological resources in accordance with local policies.

<sup>&</sup>lt;sup>5</sup> City of Madera General Plan. <u>https://www.madera.gov/wp-content/uploads/2016/04/City-of-Madera-GP-08-03-10-w-HE-</u> <u>Revised.pdf</u> accessed April 2021.

<sup>&</sup>lt;sup>6</sup> Natural Wetlands Inventory. <u>https://www.fws.gov/wetlands/data/mapper.html</u> accessed April 2021.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

**No Impact.** The Project site and the immediate area surrounding the Project site are not within the boundary of an adopted or proposed local, regional, or State adopted habitat conservation plan (HCP), or similar types of conservation plans. Therefore, the Project would not conflict with the provisions of an adopted or proposed HCP or similar approved local, regional, or state habitat conservation plan. Therefore, the Project will have *no impact*.

### 4.5 Cultural Resources

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Cause a substantial adverse change in the significance of a historical resource pursuant to in §15064.5?</li> </ul>				$\boxtimes$
<ul> <li>b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?</li> </ul>			$\boxtimes$	
c) Disturb any human remains, including those interred outside of dedicated cemeteries?				$\boxtimes$

### 4.5.1 Impact Assessment

## a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to in §15064.5?

**No Impact.** The City of Madera notes in its General Plan that historical resources exist within the planning area; however, none have been identified on or adjacent to the Project site. There are three buildings constructed that are listed or eligible to be listed on the National Register of Historic Places within the City. None of these buildings are in the Project area. The General Plan EIR assesses the presence of paleontological resources and determined that there most likely does not exist fossil resources within the planning area. Therefore, the Project will have *no impact*.

## b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

**No Impact.** The City of Madera General Plan and its EIR do not identify any regions within the City limits and planning area as having any significant archaeological value. The General Plan implements a policy that should any ground disturbance cause prehistoric, archaeologic, or fossil artifacts to surface, construction must stop, and professional site analysis be completed. With this policy, the Project will have *a less than significant impact* in causing adverse changes in significant archaeological resources.

## c) Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

**No Impact.** The Project would not disturb any human remains, including those interred outside of formal cemeteries, because there are no known human remains located in the affected territory. Any human remain encountered during ground disturbing activities are required to be treated in accordance with California Code of Regulations Section 15064.5(e), Public Resources Code Section 5097.98, and California Health and Safety Code Section 7050.5, which state the mandated procedures of conduct following discovery of human remains. Additionally, all construction must stop in the event any human remains are uncovered and appropriate authorities notified. Therefore, the Project will have *no impact*.

## 4.6 Energy

Would	the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			$\boxtimes$	
b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			$\boxtimes$	

### 4.6.1 Impact Assessment

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

**Less Than Significant Impact.** Project construction will result in energy consumption. Heavy equipment used to bring materials to and from the site, prepare the land, and tools used will consume petroleum products. The use of this energy is necessary for site development and will be utilized only when needed for construction progress. Construction would be temporary in nature and of a limited scale. Once operational, the Project will comply with Title 24, Part 6 of the California Code of Regulations, known as the Building Energy Efficiency Standards. As a result, the Project would not result in wasteful or inefficient use of energy resources and would thus have a *less than significant impact*.

## b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

**Less Than Significant Impact.** Both state and local authorities regulate energy use and consumption as noted above. These regulations at the state level intended primarily to reduce energy use and associated greenhouse gas (GHG) emissions. These regulations include, among others, Assembly Bill (AB) 1493 – Light-Duty Vehicle Standards, California Code of Regulations Title 24, Part 6 – Energy Efficiency Standards, California Code of Regulations Title 24, Part 6 – Energy Efficiency Standards, California Code of Regulations Title 24, Part 11 – California Green Building Standards. Because the project would comply with these measures during both construction and operations, the project will have *a less than significant impact*.

## 4.7 Geology and Soils

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: <ol> <li>Rupture of a known earthquake fault, as delineated on the most recent</li> <li>Alquist-Priolo Earthquake Fault Zoning</li> <li>Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.</li> </ol> </li> </ul>				
ii) Strong seismic ground shaking?			$\square$	
<ul><li>iii) Seismic-related ground failure, including liquefaction?</li></ul>			$\boxtimes$	
iv) Landslides?			$\square$	
b) Result in substantial soil erosion or the loss of topsoil?				$\boxtimes$
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?				
<ul> <li>d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994) creating substantial direct or indirect risks to life or property?</li> </ul>				$\boxtimes$
<ul> <li>e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?</li> </ul>				
<ul> <li>f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?</li> </ul>				$\boxtimes$

### 4.7.1 Impact Assessment

- a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
  - a-i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

**Less Than Significant Impact.** No known faults with evidence of historic activity cut through the valley soils in the Project vicinity.<sup>7</sup> The major active faults and fault zones occur at some distance to the east, west and south of the Project site. The Ortigalita Fault is approximately 50 miles west with the San Andreas Fault another 20 miles further west. Due to the geology of the Project area and its distance from active faults, the potential for loss of life, property damage, ground settlement, or liquefaction to occur in the project vicinity is considered minimal. The California Uniform Building Code (UBC) establishes minimum standards for structures located in regions subject to ground shaking hazard areas. Structures constructed on-site would be required by State law and City ordinances to be constructed in accordance with UBC and to adhere to all current earthquake construction requirements. Therefore, the Project would have *a less than significant impact*.

#### a-ii) Strong seismic ground shaking?

**Less Than Significant Impact.** The Project site is not within an Alquist-Priolo Earthquake Fault Zone. The Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking. Ground shaking generally decreases with distance and increases with the depth of unconsolidated alluvial deposits. The most likely source of potential ground shaking is attributed to the San Andreas (approximately 85 miles west), Owens Valley (approximately 100 miles east), and the White Wolf faults. Based on this premise and considering the distance to the causative faults, the potential for ground motion in the vicinity of the Project site is such that a minimal risk can be assigned. Therefore, the Project would result in *a less than significant impact*.

#### a-iii) Seismic-related ground failure, including liquefaction?

**Less Than Significant Impact.** The Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction. Liquefaction describes a phenomenon in which a saturated soil loses strength during an earthquake as a result of induced shearing strains. Lateral and vertical movement of the soil mass combined with loss of bearing usually results. Loose sand, high groundwater conditions (where the water table is less than 30 feet below the surface), higher intensity earthquakes, and particularly long duration of ground shaking are the requisite conditions for liquefaction. None of these conditions is present at the Project site. Therefore, the Project would result in *a less than significant impact*.

a-iv) Landslides?

<sup>&</sup>lt;sup>7</sup> California Department of Conservation. <u>https://maps.conservation.ca.gov/cgs/DataViewer/</u> accessed April 2021.

**Less Than Significant Impact.** The Project site is generally flat. Due to the flat and level topography, the project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides. Therefore, the Project would result in *a less than significant impact*.

#### b) Would the project result in substantial soil erosion or the loss of topsoil?

No Impact. The Project would not result in substantial soil erosion or the loss of topsoil. Construction of urban uses would create changes in absorption rates, drainage patterns, and the rate and amount of surface runoff on the selected project site. Standard construction practices that comply with the City of Madera ordinances and regulations, the UBC, and professional engineering designs approved by the Madera Engineering Department will mitigate any potential impacts from future urban development, if any. In addition, the project would require a project-specific Storm Water Pollution Prevention Plan (SWPPP) as required by the California Construction General Permit that would ensure soil erosion is minimized during all construction activities. Therefore, the Project would result in *no impact*.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

**No Impact.** Due to the relatively flat topography of the Project site and greater surrounding area, landslides are not considered a potentially significant geologic hazard. The Project site overall has a less than two percent slope. Therefore, the Project would result in *no impact.* 

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

**No Impact.** The Project would not be located on expansive soil, as defined in Table 18-1-B of the UBC, and would therefore not create substantial direct or indirect risks to life or property. The Project soil types consist of loam to sandy loam textures. Therefore, the Project would result in *no impact*.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

**No Impact.** The Project would not require the construction or use septic tanks or alternative wastewater disposal systems. The Project will be tied into the City's existing sewer system; therefore, there would be *no impact.* 

## f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geological feature?

**No Impact.** The Project is not in the vicinity of or located on any unique paleontological or unique geological resources. The City's General Plan EIR included a search of the University of California Museum of Paleontology (UCMP) database which returned no resources within the planning area. The City of Madera General Plan has implemented policies on what to do in the event any resources of the kind should appear. Therefore, the Project would have *no impact.* 

### 4.8 Greenhouse Gas Emissions

Would	the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			$\boxtimes$	
b)	Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?				

Climate change is a public health and environmental concern around the world. Globally, temperature, precipitation, sea level, ocean currents, wind patterns, and storm activity are all affected by the presence of GHG emissions in the atmosphere. Human activity contributes to emissions of six primary GHG gases: carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. Human-caused emissions of GHGs are linked to climate change.

In 2006, the California State Legislature adopted AB 32, the California Global Warming Solutions Act of 2006, which aims to reduce GHG emissions in California. GHGs, as defined by AB 32, include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. AB 32 requires the CARB, the State agency that regulates statewide air quality, to adopt rules and regulations that would achieve GHG emissions equivalent to 1990 statewide levels by 2020. The Air District adopted a 29 percent less than Business-As-Usual (BAU) reduction in GHGs to meet the 2020 standard.

In 2016, Senate Bill (SB) 32 was adopted, which established a goal to achieve GHG emissions equivalent to 40 percent below 1990 statewide levels by 2030. No project-level reduction standard has been adopted to meet the 2030 standard established by SB 32; however, a recommended local plan-level emissions target of no more than 6 metric tons of carbon dioxide emissions (MTCO2e) per capita per year has been identified by CARB in the 2017 Climate Change Scoping Plan. This target has been used in this analysis as an interim threshold of significance for 2030 in-lieu of an adopted project-level standard.

The Conservation Element of the City of Madera General Plan includes several goals, policies, and programs in the Air Quality, GHG Emissions, and Climate Change sections that address and promote practices that meet or exceed all State and federal standards and meet or exceed all current and future State-mandated targets for reducing GHG emissions. The City also requires applicants for all public and private development to integrate appropriate methods that reduce GHG emissions consistent with the Energy and Green Building sections of the Conservation Element, General Plan Policies CON-40 through 46.

### 4.8.1 Impact Assessment

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

**Less than Significant Impact.** The Project would generate GHG emissions which contribute to global warming. GHG emissions from construction activities are one-time, short-term emissions and therefore would not significantly contribute to long-term cumulative GHG emissions impacts in the air basin. Long-term emissions would be from vehicles refueling and using the drive through that is proposed on site and perpetual solid waste generated by the Project. According to the CalEEMod outputs found in Appendix A, the Project's 30-year amortized construction emissions added to the unmitigated annual carbon dioxide emissions (CO2e) operational emissions falls below the generally accepted significant threshold of 3,000 MTC02e/yr. Therefore, the Project would have a *less than significant impact*.

## b) Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

**Less Than Significant Impact.** The Project consistent with all City of Madera General Plan policies, is required to incorporate water-efficient landscaping, and is required to make the necessary road improvements to improve traffic flow. The Project will not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions as the sum of both amortized construction and annual operational emissions would not exceed accepted thresholds of significance. Therefore, the Project would have a *less than significant impact*.
### 4.9 Hazards and Hazardous Materials

Would	the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?				
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			$\boxtimes$	
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			$\boxtimes$	
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				$\boxtimes$
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				$\boxtimes$
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				$\boxtimes$
g)	Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?				$\boxtimes$

#### 4.9.1 Impact Assessment

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

**Less Than Significant Impact.** The Project consists of construction of a fuel canopy with six fueling stations, which will total 12 fuel pumping stations. Underground Storage Tanks (UST) will be utilized to provide fuel for the pumping stations. Transportation of fuel to the site USTs will be by semi-truck operators who have training to handle hazardous materials. Although there exists a risk of occasional spill or accident in route to the site, proper management practices, safe handling, and following applicable rules and regulations for the management of hazardous materials will result in a *less than significant impact* on any potential hazard to the public or environment.

# b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

**Less Than Significant Impact.** The trips generated by this new development have been addressed in a Traffic Impact Study (TIS) prepared by KD Anderson and Associates and dated September 29, 2020. While generating new trips and traffic, the probability of accidents is likely to increase. The TIS suggests mitigation measures and improvements to the site to handle increased traffic volumes, which are detailed below and designed increase safety and decrease accident probability. With these measures in place, accidents with semi-trucks transporting fuel to and from the site is further minimized. In addition, Project construction would involve standard construction materials delivered to the site and would have no unusual aspect that could increase the likelihood of accident conditions. Therefore, the Project would have a *less than significant impact* on creating a hazard to the public or environment through accident conditions.

# c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

**Less Than Significant Impact.** The Sherman Thomas Charter School is one school within one-quarter mile of the proposed Project. As noted above in the response to item (a), compliance with applicable laws and regulations would minimize hazards risks to a level of less than significant and no aspect of Project construction would involve types or quantities of hazardous materials beyond those typically associated with commercial construction. Therefore, the Project would result in a *less than significant impact* on school facilities.

# d) Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

**No Impact.** According to GeoTracker, the Project would not be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, it would not create a significant hazard to the public or the environment. Therefore, there would be **no** *impact.* 

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

**No Impact.** The Project site is not located within the Airport Land Use Compatibility Zone map that was adopted with the City of Madera General Plan. The site is located approximately 1.5 miles east of the Madera Municipal Airport; therefore, it will have *no impact* in safety hazards or excessive noise for people residing or working in the Project area.

# f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

**No Impact.** The Project will conform to the policies and uses outlined and approved in the City of Madera General Plan. Emergency response to the Project site has been evaluated for the use and zoning proposed approved. On site safety and egress will follow the requirements of the UBC and any applicable standards. Conflicts with emergency evacuation plans typically result from events such as land closures during construction. The Project does not propose such lane closures during either construction or operations. Therefore, the project will have *no impact*.

# g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

**No Impact.** According to CalFire and their Fire Resource Assessment Program (FRAP) Fire Hazard Severity Zone (FHSZ) viewer, the Project site is not within an area of moderate, high, or very high fire risk for the Local Responsibility Area.<sup>8</sup> Therefore, there would be *no impact*.

<sup>&</sup>lt;sup>8</sup> Cal FIRE. Fire Hazard Severity Zones Map. <u>https://osfm.fire.ca.gov/divisions/wildfire-planning-engineering/wildland-hazards-building-codes/fire-hazard-severity-zones-maps/</u> accessed April 2021.

### 4.10 Hydrology and Water Quality

	Potentially Significant	Less than Significant with Mitigation	Less than Significant	No
Would the project:	Impact	Incorporated	Impact	Impact
<ul> <li>a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?</li> </ul>			$\square$	
<ul> <li>b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?</li> </ul>				
<ul> <li>c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:</li> <li>i) result in substantial erosion or siltation</li> </ul>				
on- or off-site;				
<ul> <li>substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;</li> </ul>				
<ul> <li>iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or</li> </ul>				
iv) impede or redirect flood flows?				
<ul> <li>d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?</li> </ul>				
<ul> <li>e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?</li> </ul>				

#### 4.10.1 Impact Assessment

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant Impact. Clearing, grading, excavation, and construction activities have the potential to impact water quality through soil erosion and increased silt and debris discharged into runoff. Additionally, the use of construction materials such as fuels, solvents, and paints may present a risk to surface water quality. Temporary storage of construction material and equipment in work areas or staging areas could create the potential for a release of hazardous materials, trash, or sediment to the storm drain system.

The Project would disturb more than one acre of soil on the Project site. Therefore, the Project would be required to comply with the National Pollutant Discharge Elimination System (NPDES) General Construction Permit (GCP). The CGP requires the submittal of Permit Registration Documents (PRDs) to the State Water Resources Board (SWRCB) prior to the start of the construction. The PRDs include a Notice of Intent (NOI), risk assessment, site map, annual fee, signed certification statement, SWPPP, and post-construction water balance calculations. The SWPPP describes the incorporation of best management practices to control sedimentation, erosion, and the potential for hazardous materials contamination of runoff during construction.

Upon completion of the Project, stormwater would runoff on-site into the permeable ground adjacent to the Project site, or into the City's stormwater system. The Project would be required to implement applicable portions of the City's Storm Water Quality Management Program, ensuring that effective and adequate Best Management Practices would be in place to minimize the pollutant load in storm drainage, thereby protecting surface water quality. In addition, implementation of General Plan policies would further protect surface quality by requiring the Storm Water Quality Management Program to be updated to include newly available best management practices. The Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. Therefore, the Project impacts would be less than significant.

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. The project will introduce impervious surfaces to the site that will interfere with groundwater recharge on the site area. Drainage systems proposed in the site design will carry runoff to designated recharge basins for the purpose of sustaining groundwater recharge. Therefore, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin and the impacts would be less than significant.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

*i) result in substantial erosion or siltation on- or off-site;* 

Less Than Significant Impact. The Project site does not contain any waterways, and therefore, implementation of the Project would not alter the course of a stream or river. However, the Project would require grading or soil exposure during construction. If not controlled, the transport of these materials via local stormwater systems into local waterways could temporarily increase sediment concentrations. To minimize this impact, the Project would be required to comply with all of the requirements of the state GCP, including preparation of PRDs and submittal of a SWPPP to the SWRCB prior to start of construction activities. Mandatory compliance with state regulations would ensure that impacts from erosion and siltation would be less than significant.

# *ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;*

**Less Than Significant Impact.** Improvements of the Project site would increase the surface runoff due to construction of impervious surfaces such as the parking lot, sidewalk, and other construction factors. The Project would be required to comply with the GCP and additional documents such as preparation of a SWPPP required to monitor run-off and decrease likelihood of flooding on-site or off-site. Therefore, the potential impacts to flooding on- or off-site would be *less then significant*.

# *iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or*

**Less Than Significant Impact.** Runoff incident to construction and once the site is fully developed will be addressed in the SWPPP. Anticipated amounts of runoff will not exceed the capacity of the current drainage system according to the City's Storm Drainage Master Plan. The Project will be required to comply with the City's ordinances, Master Plan, and standard practices for stormwater drainage. Therefore, the Project impacts would be *less than significant*.

#### *iv) impede or redirect flood flows?*

Less Than Significant Impact. The Project will be required to construct storm drain conveyance improvements to City of Madera standard, which takes into consideration the many factors of designing a storm drain system, including capacity to carry runoff from site to the designated drainage basin. The location of the Project site is generally flat with little variation in elevation. Construction will follow local design standards to ensure no flow of waters are impeded in the event of any flood, although the site is located within an area of minimal flooding hazard (Zone X). Therefore, the Project will have a *less than significant impact*.

# d) Would the project in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundations?

**Less Than Significant Impact.** The Project is in an unshaded Zone X flood zone according to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) of the area<sup>9</sup>. Unshaded Zone X has a description of being outside of the 0.2 percent annual chance of flood. The Project will be designed knowing the risks of being in this flood zone, although very minimal risk of flood is expected. Construction

<sup>&</sup>lt;sup>9</sup> FEMA Flood Map Service Center: Search by Address. FIRM 06039C1155E. September 2008. <u>https://msc.fema.gov/portal/search?AddressQuery=Madera%2C%20CA#searchresultsanchor</u> accessed May 2021.

of the site and storage of fuel in underground storage tanks designed accordingly will prevent risks of releasing of pollutants due to inundation, therefore there will be a *less than significant impact*.

## e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

**Less Than Significant Impact.** The City of Madera is located in the Madera Subbasin. The City of Madera adopted the Joint Groundwater Sustainability Plan (GSP) in January 2020. The GSP includes two City of Madera projects, which include the installation of water meters and the construction of Berry Basin, a groundwater recharge basin.<sup>10</sup> The basin is currently under construction and the project is required to install water meters. Therefore, the Project would not conflict with or obstruct the implementation of a water quality control plan or sustainable groundwater management plan. Therefore, there would be a *less than significant impact*.

<sup>&</sup>lt;sup>10</sup> Madera Subbasin Coordination Committee. Madera Subbasin Sustainable Groundwater Management Act Join Groundwater Sustainability Plan. January 2020. <u>https://sgma.water.ca.gov/portal/gsp/preview/21</u> accessed April 2021.

### 4.11 Land Use and Planning

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Physically divide an established community?</li> </ul>				$\boxtimes$
<ul> <li>b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?</li> </ul>				

#### 4.11.1 Impact Assessment

#### a) Would the project physically divide an established community?

**No Impact.** The Project does not divide any established or existing communities. The Project site will introduce a physical barrier: however, there are not communities existing surrounding the project to divide. Therefore, the Project would have **no impact** in potentially dividing an established community.

# b) Would the project cause a significant environmental conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

**No Impact.** The Project conforms with the approved City of Madera General Plan Land Use and Zoning Maps. Therefore, the Project will not conflict with any land use plan, policy, or regulation and have *no impact.* 

### 4.12 Mineral Resources

Would	the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				$\boxtimes$
b)	Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?				$\boxtimes$

#### 4.12.1 Impact Assessment

a) Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

**No Impact.** The Project site is not identified as containing any mineral deposits, according to the Department of Conservations, Division of Mine Reclamation<sup>11</sup>. Therefore, the Project would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. As such, there would be *no impact*.

b) Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

**No Impact.** The City of Madera General Plan and its EIR do not identify any mineral resources of significant value in the Project area or surrounding areas. Considering these are the main policy documents which assessed City wide mineral resources, this Project would have *no impact* when using them as bases for evaluation.

<sup>&</sup>lt;sup>11</sup> Mines Online. California Department of Conservation, Division of Mine Reclamation. 2016. <u>https://maps.conservation.ca.gov/mol/index.html</u> accessed May 2021.

### 4.13 Noise

Would the project result in:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?</li> </ul>			$\boxtimes$	
b) Generation of excessive ground borne vibration or ground borne noise levels?			$\square$	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				$\boxtimes$

#### 4.13.1 Impact Assessment

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

**Less Than Significant Impact.** The proposed Project would temporarily increase ambient noise levels in the vicinity due to construction equipment use. The Project introduces design and functional elements to reduce noise during sensitive hours of the day. Pursuant to Section 3-11.02 of the City of Madera Municipal Ordinance, construction would be limited to 6 a.m. to 8 p.m. to reduce noise generation to adjacent properties. The proposed convenience store hours of operation is anticipated to be 24 a day, seven days a week. The proposed retail building hours of operation is also anticipated to be seven days a week from 9 a.m. to 11 p.m. With these conditions imposed on the Project, it would have a *less than significant impact*.

# b) Would the project result in generation of excessive ground borne vibration or ground borne noise levels?

Less Than Significant Impact. Construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. Construction activities can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures, and soil type. The generation of vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibrations at moderate levels, to slight damage at the highest levels. Given the level of construction for this Project, it is not anticipated the Project would

generate excessive ground-borne vibration or ground-borne noise levels. Therefore, the Project would have a *less than significant impact*.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

**No Impact.** The project is not located within the vicinity of a private airstrip or within the policy area of the Airport Land Use Compatibility Plan for County of Madera. The nearest airport, Madera Municipal Airport, is approximately 1.5 miles west from the Project site. Noise levels anticipated to affect the Project site from the Madera Municipal Airport are not a factor for concern in analysis, therefore the project would have **no** *impact.* 

### 4.14 Population and Housing

Would	the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			$\boxtimes$	
b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				$\boxtimes$

#### 4.14.1 Impact Assessment

a) Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

**Less than Significant Impact.** Although new employment would be created, the workforce would be expected to be comprised of existing residents of the City and County of Madera. The Project will include development of infrastructure and roadways to accommodate the Project site. Such improvements have been evaluated in the City of Madera General Plan Circulation and Infrastructure Element, and the improvements are existing and connecting to already built out infrastructure. As such, the Project would have a *less than significant impact* on population growth.

b) Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

**No Impact.** No homes exist on the Project site; therefore, no housing would be impacted. Therefore, the project would have *no impact.* 

### 4.15 Public Services

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:</li> </ul>				
Fire protection?			$\square$	
Police protection?			$\square$	
Schools?			$\square$	
Parks?			$\square$	
Other public facilities?			$\square$	

#### 4.15.1 Impact Assessment

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

#### Fire Protection:

**Less Than Significant Impact.** The Project site is located within the City's fire service area and is within acceptable restrictions for fire response. The nearest fire station is Station #58 located approximately 1 ¼ mile west of the Project site. No additional need for fire facilities is required. The Project will be required to install fire hydrants and meet specifications for flow required to serve the area. With these conditions being imposed on the Project, it will have a less than significant impact to fire service facilities in the area and not warrant the need for a new or physically altered facility. It will maintain compliance with acceptable service rations therefore the Project would have a *less than significant impact*.

#### **Police Protection**

Less Than Significant Impact. The Project site is currently served by the Madera Police Department and would continue to be served by the Madera Police Department. The Madera Police Department is located

approximately 1 ¾ miles southeast of the Project site. The proposal for alcohol sales could potentially increase the possibility of public intoxication and Driving Under the Influence (DUI) in the immediate area. However, the Madera Police Department encourages owners and the public to report these matters to the police, and consumption of alcohol on the premises will be prohibited. With this, the Project would not result in the need for new or altered services, or a substantial alteration to the patrol requirements from City's Police Department. Therefore, the Project would have a *less than significant impact*.

#### Schools

**Less Than Significant Impact.** The Project would not likely result in the construction of new residences. It could potentially generate new employees to operate or maintain the Project, but the existing housing inventory of the City is adequate to provide residency for the potential impact. The project is likely to draw potential employees from the City and County of Madera residents. Therefore, the Project would have *a less than significant impact* on school facilities.

#### Parks

**Less Than Significant Impact.** The Project would not result in the construction of new residences and the addition of employees is minimal to operate and maintain the Project. The number of employees potentially generated would not warrant the need for additional park space, and future employees are likely to be residents within the existing City and County of Madera residential areas; therefore, the Project would have *a less than significant impact* on parks.

#### Landfills

Less Than Significant Impact. The waste generated by the Project and incidental increases in waste generation such as potential increases in population due to employees in very minimal. The Municipal Service Review for the City of Madera prepared for the Madera Local Agency Formation Commission in 2018 states that waste is diverted to the Fairmead Landfill by contract disposal services provided by Mid-Valley. The Municipal Service Review discusses that waste facilities and infrastructure necessities are discussed during contract negotiations for service, as to ensure capacity to serve the City. No new disposal or landfill facilities are currently needed to accommodate the Project or City, as discussed during contract negotiations with Mid Valley Disposal; therefore, the Project would have *a less than significant impact*.

### 4.16 Recreation

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?</li> </ul>			$\boxtimes$	
<ul> <li>b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?</li> </ul>				

#### 4.16.1 Impact Assessment

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. The Project as proposed is surrounded generally by commercial uses. To the north of the Project site are private, large-lot rural residences located in Madera County, which do not have any neighborhood parks. The nearest neighborhood park is Rotary Park, approximately three-quarter of a mile south of the Project site located on Gateway Drive and Cleveland Avenue. Employment in the area would increase; however, it will likely consist of existing residents which would not drive the need to create new or expand upon existing parks. Therefore, it can be anticipated that there is a *less than significant impact* to park facilities or any incidental acceleration to deterioration of park facilities.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

**Less Than Significant Impact.** The Project does not include recreational facilities or in any incidental way necessitate the requirement of construction or expansion of existing facilities. As stated above, the employees for this project are likely to come from existing residents within the City and County of Madera which will not drive the need for new or expanded recreation facilities. Therefore, the Project would have a *less than significant impact* or adverse physical effect on the environment regarding recreational facilities.

### 4.17 Transportation

Would t	he project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?			$\boxtimes$	
b)	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			$\boxtimes$	
c)	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				
d)	Result in inadequate emergency access?				$\square$

A Traffic Impact Study (TIS) was prepared for the Project by KD Anderson and Associates, dated September 29, 2020 (**Appendix B**) to evaluate the potential traffic impacts with regard to conflicts with existing plans, ordinances, or policies. Existing a.m. and p.m. peak hour traffic volumes were counted in March 2020 while school was still in session. The objective of the TIS was to identify what effects the Project would have on the area roadway network and local intersections. The TIS parameters are consistent with the City's guidelines and addressed the following traffic scenarios:

- 1. Existing A.M. and P.M. Peak Hour Traffic Conditions;
- 2. Existing Plus Project A.M. and P.M. Peak Hour Traffic Conditions;
- 3. Existing Plus Approved Projects Traffic Conditions;
- 4. Existing Plus Approved Projects Plus Project Traffic Conditions;
- 5. Cumulative Year 2035 Conditions without Project; and
- 6. Cumulative Year 2035 Conditions with Project.

#### 4.17.1 Environmental Setting

The TIS studied and evaluated one existing intersection (Country Club Drive / Adell Street) and one existing driveway (Country Club Drive / Tractor Supply Company Driveway). The Country Club Drive / Adell Street intersection is a minor leg stop controlled tee intersection. The northbound approach includes a through lane and a shared through lane and a shared through-right turn lane while the southbound approach includes a left lane and two through lanes. Marked crosswalks are not present in the intersection.

The County Club Drive / Tractor Supply Company Driveway is a stop controlled along the driveway approach. Northbound Country Club Drive includes a through lane and a shared through-right lane while the southbound approach includes a two-way left-turn-lane north of the driveway. The two-way left-turn-lane is used for left turning vehicles to enter the Project site. A raised median is present beginning at the north end of the driveway and extends about 260 feet south. While the raised median inhibits left turning

outbound Tractor Supply Company traffic, some motorists turn right and make an immediate U-turn directly north of the island.

Both the Country Club Drive / Adell Street and one existing driveway Country Club Drive / Tractor Supply Company Driveway currently operate within accepted City of Madera Level of Service (LOS) thresholds; however, the Country Club Drive / Adell Street intersection meets the peak hour signal warrant. While the peak hour signal warrant is met, the meeting of a signal warrant does not necessitate installation of a traffic signal.

The City of Madera uses LOS C as its minimum LOS criteria for intersections and roadway segments. As stated in the Circulation and Infrastructure Element of the City of Madera General Plan, LOS D is applicable to arterial roadways, or roadway segments with at-grade railroad crossings that were experiencing congestion exceeding LOS C during peak hour travel times as of the date the General Plan was adopted. LOS D is also applicable to intersections and roadway segments in the Downtown District as defined in the Land Use Element of the City's General Plan. For the purpose of this TIS, the minimum LOS criteria for intersections and roadway segments is LOS C.

#### 4.17.2 Impact Assessment

a) Would the project conflict with a plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

**Less Than Significant Impact.** The Project is considered a local serving mixed use development that is expected to generate approximately 4,405 daily trips, 349 a.m. peak hour trips and 310 p.m. peak hour trips. After accounting for pass-by and internal trips, the Project is projected to generate 1,284 new daily trips, 76 new a.m. peak hour trips and 105 new p.m. peak hour trips. As noted in the Technical Advisory on Evaluating Transportation Impacts in CEQA, local serving retail projects are presumed to have a *less than significant transportation impact*.

#### Pedestrian / Bicycle Circulation

In the project vicinity, sidewalks are present along Country Club Drive. No sidewalks are present along Adell Street between Country Club Drive and approximately 500 west of Sonora Street. Sonora Street is approximately one-half mile east of the Project site. In the vicinity of there are currently no marked bike lanes or bike paths.

As a condition of approval, the proposed Project would be required to widen and improve Adell Street to City Collector street standards along the frontage of the Project site. A sidewalk along the south side of Adell Street would be constructed as part of the required roadway improvements. The Adell Street improvements would also require the striping and signage for an east bound bike lane. Thus, the Project would not conflict with plans or policies of the General Plan germane to pedestrian or bicycle facilities or circulation. Therefore, the Project would result in a *less than significant impact*.

#### Public Transit

Madera Area Express (MAX), managed by the City of Madera, provides fixed route services in the City of Madera. The routes operate Monday through Saturday. In addition to a fixed route services, the City offers a Madera Dial-A-Ride service, which is a demand-response system, that is available weekdays between 7 a.m. and 6:30 p.m., and Saturdays between 9 a.m. and 4 p.m. Sunday service is also available between 8:30 a.m. and 2:30 p.m. The closest stops are along Route 1, where the route travels through the Country Club

Drive / Sherwood Way intersection and the Adell Street / Sonora Street intersection. Both intersections are about one-half mile from the Project site and within walking distance of the proposed Project. Therefore, the Project would result in a *less than significant impact*.

#### Roadways

Within the City, all major roadways are classified based on the City's General Plan Circulation Master Plan. Following is a brief description of the roadways located within the Project area:

- □ Country Club Drive: Country Club Drive is a north-south road within the City and extends north into the County of Madera. Within the Project vicinity, Country Club Drive currently varies between four-lane divided and undivided road. In the City's Circulation Master Plan, Country Club Drive is designated as an Arterial. Designated Arterials generally include up to four lanes, although total widths of six lanes may be appropriate in some locations. To reduce traffic interruptions and improve safety, direct access via driveways is generally not permitted.
- □ Adell Street: Adell Street is an east-west road within the City. Within the Project vicinity, Adell Street is currently an undivided two-lane rural road. In the City's Circulation Master Plan, Adell Street is designated as a Collector. Designated Collectors generally included up to four lanes. To reduce traffic interruptions and improve safety, direct access via driveways is generally not permitted.

For each of the traffic scenarios analyzed, the proposed Project would conflict with the City of Madera General Plan LOS standards. The Project's General Plan LOS standard conflicts under each of the traffic scenario analyzed are identified below.

**Existing Plus Project Conditions**. Under this traffic scenario, all intersections except the Country Club Drive / Adell Street would operate within accepted City of Madera LOS thresholds. This intersection would operate at LOS E along Adell Street in the a.m. peak hour. While the peak hour signal warrant is met, the meeting of a signal warrant does not necessitate installation of a traffic signal. Under this condition, the Project would be required to install frontage half-street improvements and restripe Adell Street in intersection. Implementing this improvement would improve the intersection to LOS C conditions. In addition to the street and intersection improvements, the Project shall be responsible for contributing its fair share to the cost of circulation improvements via the existing Citywide traffic impact mitigation (TIM) fee program.

**Existing plus Approved Projects Conditions**. Under this traffic scenario, all intersections would continue to operate within accepted City of Madera LOS thresholds. The Country Club Drive / Adell Street intersection would continue to meet the peak hour signal warrant.

**Existing plus Approved Projects Plus Project Conditions**. Under this traffic scenario, the Country Club Drive I Adell Street intersection would operate at LOS E, below the City's LOS threshold. As identified under the Existing plus Project conditions, the installation of the half-street improvements and restriping of Adell Street to include westbound left and right tum lanes at Country Club Drive intersection would be required to continue to maintain LOS C conditions at the Country Club Drive / Adell Street intersection. No additional Project improvements would be required.

In addition to the street and intersection improvements, the Project shall be responsible for contributing its fair share to the cost of circulation improvements via the existing Citywide TIM fee program.

**Cumulative Year 2035 Conditions without Project**. Under this traffic scenario, all intersections will continue to operate within accepted City of Madera LOS thresholds. The Country Club Drive / Adell Street intersection would continue to meet the peak hour signal warrant. While the peak hour signal warrant is met, the meeting of a signal warrant does not necessitate installation of a traffic signal.

**Cumulative Year 2035 with Project**. Under this traffic scenario, the Country Club Drive/ Adell Street intersection would operate at LOS E, below the City's LOS threshold. As identified in the Existing plus Project conditions, the installation of the half-street improvements and restriping of Adell Street to include westbound left and right tum lanes at the Country Club Drive intersection would be required to continue to maintain LOS C conditions at the Country Club Drive/ Adell Street intersection. No additional Project improvements would be required.

In addition to the street and intersection improvements, the Project shall be responsible for contributing its fair share to the cost of circulation improvements via the existing Citywide TIM fee program.

In conclusion, the Project will be required, as a condition of approval, to install half-street improvements and restripe Adell Street to include westbound left and right tum lanes at the Country Club Drive intersection. In addition, as a condition of approval, the Project will be required to contribute its fair share to the cost of circulation improvements via the existing Citywide TIM fee program. Implementation of the improvements identified in the TIS and described above would reduce the Project's roadway impacts to a *less than significant impact*.

# b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3 subdivision (b)?

**Less than significant impact.** The California Office of Planning and Research (OPR) guidance has provided direction on the treatment of CEQA traffic analyses for projects in the *Technical Advisory on Evaluating Transportation Impacts in CEQA*. The Technical Advisory recommends analyzing the effect of projects over the area where the project substantially affects the travel pattern. Local serving retail projects, such as the proposed Project, are presumed to have a *less than significant impact* on transportation.

Furthermore, Vehicle Miles Traveled (VMT) were considered by the traffic engineering consulting firm. Although the City is yet to adopt thresholds for VMT impacts, the proposed Project would not have a significant transportation impact based on the OPR Technical Advisory. The proposed Project would have a lower VMT per service population and VMT per employee when compared to the regional average, and therefore would not result in a significant VMT impact. The Project would be compliant with the OPR VMT metrics.

# c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

**Less than significant impact.** The Project site would have three access point directly serving the area. One is existing along Country Club Drive and is located on the property south of the Project whose current tenant is Tractor Supply Co. The two proposed would be along Adell Street along the northern property line of the property. These access drives will be reviewed and approved in conformance to City street

specifications and sight distance standards to ensure the Project would not result in include sharp curves or dangerous intersections. Therefore, the Project would result in a *less than significant impact*.

#### d) Would the project result in inadequate emergency access?

**No impact.** The Project has been reviewed by the Fire, Police, and Engineering Departments of the City to ensure the Project would provide adequate emergency access. Access drive standards, radius of curbs, and maneuverability throughout the site will be ensured through conditions imposed upon the project, therefore the project would have **no impact** on emergency access.

### 4.18 Tribal Cultural Resources

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:</li> </ul>				
<ul> <li>i) Listed or eligible for listing in the California Register of Historical Resources, or in the local register of historical resources as defined in Public Resources Code section 5020.1(k), or</li> </ul>				
<ul> <li>ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.</li> </ul>				

#### 4.18.1 Impact Assessment

- a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
  - i) Listed or eligible for listing in the California Register of Historical Resources, or in the local register of historical resources as defined in Public Resources Code section 5020.1(k), or

No impact. A previous sacred lands search completed for the City of Madera General Plan EIR did not identify any sensitive Native American cultural resources either within or near the Project site. California

Native American tribes traditionally and culturally affiliated with the Project area did not request consultation pursuant to Public Resources Code Section 21080.3.1. The Project is not listed or eligible for listing in the California Register of Historical Resources (CRHR), or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k). Therefore, the Project would have **no impact** on any tribal cultural resource that is listed in, or eligible for listing in, the CRHR or in a local register of historical resources.

*ii)* A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

**Less than significant impact**. The Project site is not a resource determined by the lead agency (City of Madera), in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. The Project site is not listed as a historical resource in the California Register of Historical Sources. As described above, no known tribal cultural resources have been identified (as defined in Section 21074) within the Project area, and no substantial information has been provided to the City to indicate otherwise. Therefore, the Project would have a *less than significant impact* on the significance of a tribal cultural resource.

### 4.19 Utilities and Service Systems

Would	the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?				
b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?			$\boxtimes$	
c)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				
d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			$\boxtimes$	
e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			$\square$	

#### 4.19.1 Environmental Setting

The Project site is a vacant property planned for commercial uses in the City of Madera General Plan. The site of the Project was analyzed in different utility planning documents, including:

- 2014 Storm Drainage System Master Plan
- 2014 Water System Master Plan
- 2014 Sanitary Sewer System Master Plan
- 2015 Urban Water Management Plan
- 2020 Sanitary Sewer Management Plan

#### 4.19.2 Impact Assessment

a) Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less than significant impact. The City implements a City-wide program for completion of incremental expansions to facilities for planned water supply, sewer treatment, and stormwater drainage. The City will condition the Project to require necessary improvements to wet and/or dry utilities to provide service to the project area and payment of impact fees to offset the Project's use of existing facilities and infrastructure. These conditions include requirements for the project to construct improvements to water, sewer, and storm drain conveyance facilities that will serve the property.

Pacific Gas and Electric Company (PG&E), the natural gas and electric service provider for the area, incrementally expands and updates its service system as needed to serve its users. Accordingly, telecommunications providers in the area incrementally expand and update their service systems in response to usage and demand. The Project will be responsible for planning and installing wastewater collection and water delivery systems, as well as electrical and telecommunications service infrastructure. In addition, the Project will be responsible for the payment of development impact fees to off-set potential impacts to these facilities resulting in *less than significant impacts*.

# b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

**Less than significant impact.** The City has sufficient water supplies available to serve the Project and its existing commitments during normal, dry, and multiple dry years. The Project must comply with the requirements of the City of Madera Engineering Department for the construction of water, wastewater, and storm water drainage infrastructure; therefore, the impact would be *less than significant*.

c) Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

**Less than significant impact.** The Project will be served by the City of Madera Wastewater Treatment Plant (WWTP). The Madera WWTP has a design capacity of 10.1 MGD and it can accommodate a design peak dry weather flow of up to 15.1 MGD. The 2014 Sanitary Sewer System assumed a 2020 population of 86,633 with an average day flow of 10.4 MGD. The served population with the Project will be approximately 66,000, and therefore approximately 24 percent below the assumed 2020 average flow. The WWTP has adequate capacity to serve the Project in addition to its existing commitments, therefore the Project will have a **less than significant impact**.

# d) Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less than significant impact. The Project does not include indirect generation of excessive solid waste through actions such as demolition of existing structures. The construction debris will be contained in designated bins and picked up by the City's contracted waste hauler or third party providing the roll-off

bins. The Fairmead Solid Waste Disposal Site is the nearest landfill to the City of Madera. While the landfill has been estimated to close in 2028, throughput has generally been less than maximum capacity and the landfill current has sufficient capacity to serve the project. The Project is not estimated to generate solid waste in excess of State or local standards, therefore the Project would have a *less than significant impact*.

# e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

**Less than significant impact.** The Project will be required to comply with all federal, state, and local solid waste reduction statutes. The State Agency Model Integrated Waste Management Act enacted in January 2000 requires at least 50 percent of solid waste diversion from disposal facilities after January 2004. The bills of lading for the Project are required to be provided to the City to monitor the solid waste generation of the Project and ensure Cal Green standards are being followed. With monitoring of solid waste generation in this regard, the Project would have a *less than significant impact*.

### 4.20 Wildfire

If locat lands c zones,	ed in or near state responsibility areas or lassified as very high fire hazard severity would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?				$\square$
b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrollable spread of wildfire?				$\boxtimes$
c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				$\boxtimes$
d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?				

#### 4.20.1 Impact Assessment

The Project site is not located in or near State Responsibility Areas or lands classified as Very High Fire Hazard Severity Zones. The project will be developed consistent with all regulations of the California Fire Code.

- a) Substantially impair an adopted emergency response plan or emergency evacuation plan?
- b) Due to slope, prevailing winds, and other factors exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?
- c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?
- d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

**No Impacts.** The Project is in an area of low fire risk and is not located in or near a State Responsibility Area or any land classified as a Very High Fire Hazard Severity Zone.<sup>12,13</sup> The nearest State Responsibility Area is approximately 10 miles northeast of the property with the nearest Very High Fire Hazard Severity Zone being 20 miles from the site. Since the Project is not subject to wildfire, it would have no impact on adopted emergency response or evacuation plans. The Project site is generally flat, therefore wildfire factors based on slope would not be applicable. The installed infrastructure would be necessary to serve the Project, and built as City standards dictate, taking into consideration the impacts on the environment. With the Project not being in a State Responsibility Area or a Very High Fire Hazard Severity Zone and relatively flat, there will not be risks associated with post-fire slope instability. Therefore, the Project would have **no impact**.

<sup>&</sup>lt;sup>12</sup> Cal FIRE. Fire Hazard Severity Zones in SRA, Madera County. <u>https://osfm.fire.ca.gov/media/6700/fhszs\_map20.pdf</u> accessed April 2021.

<sup>&</sup>lt;sup>13</sup> Cal FIRE. Fire Hazard Severity Zones in LRA, Madera County. <u>https://osfm.fire.ca.gov/media/6703/fhszl06\_1\_map20.pdf</u> accessed April 2021.

### 4.21 CEQA Mandatory Findings of Significance

Does the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
<ul> <li>a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?</li> </ul>				
<ul> <li>b) Have impacts that are individually limited, but cumulatively considerable?</li> <li>("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?</li> </ul>				
<ul> <li>c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?</li> </ul>				

#### 4.21.1 Impact Assessment

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less than significant impact. The City of Madera General Plan EIR does not identify any threatened or endangered species in the Project area according to Figure 4.10-3. Further, the Project site and its surroundings are absent of any riparian habitat or sensitive natural communities of special concern according to the General Plan EIR Figure 4.10-2. The site is designated as ruderal in the General Plan EIR, which is roadside land disturbed by current and future development meaning it does not possess substantial vegetation or hydrology to produce wetlands. There do not exist water features such as a stream, river, creek, or other watercourse that could be damaged by the development. In addition, there is no adopted policy or ordinance specifically protecting habitats or species within the project area. The analysis in this Initial Study results in a determination that the Project would have a *less than significant* 

*impact* on the environment. The environment, habitats, sustainability, and populations of any wildlife will not be affected as there are no significant communities present at this Project site.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

**Less than significant impact.** CEQA Guidelines Section 15064(i) States that a Lead Agency shall consider whether the cumulative impact of a project is significant and whether the effects of the project are cumulatively considerable. The assessment of the significance of cumulative effects of a project must be conducted in connection with the effects of past projects, other current projects, and probable future projects.

The Project could potentially drive the viability of future commercial projects in the area by increases in local traffic. As those projects come to the area, they will be evaluated for their impacts, as to the timing it is unknown. The Project site was anticipated for urbanization with the development of the City's General Plan. Therefore, implementation of the Project would not result in significant cumulative impacts and all potential impacts would be reduced to *less than significant* through the implementation of basic regulatory requirements incorporated into Project design.

# c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than significant impact. The Project would not have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly. Impacts are considered to be *less than significant*

#### Country Club Commercial - Madera County, Annual

#### Project Characteristics -

Land Use - Square feet and acreage calculations based on site plan provided by applicant. Parking lot land use includes paved surface area and landscape area. Fast Food establishment is a different land use than project being proposed which is a coffee/donut shop. Traffic impact analysis for project utilized different ITE land uses for calculations.

Construction Phase - No demolition required. Site is presently vacant.

Mobile Land Use Mitigation - Creation of jobs from new businesses including convenience store, drive-through coffee shop and future retail. The intersection of Country Club Drive and Adell Street will be improved with pedestrian access striping. The sidewalk along Adell Street will be constructed to City standards, improving pedestrian network and accessibility. Country Club Drive will have a traffic median installed. Nearest bus stop is 0.2 miles from the project site.

Energy Mitigation - https://www.energy.ca.gov/sites/default/files/2020-03/Title\_24\_2019\_Building\_Standards\_FAQ\_ada.pdf

Waste Mitigation -

Vehicle Trips - Daily trips based off of traffic impact analysis of traffic impacts derived from project.

Landscape Equipment -

Page 2 of 26

#### Country Club Commercial - Madera County, Summer

#### Project Characteristics -

Land Use - Square feet and acreage calculations based on site plan provided by applicant. Parking lot land use includes paved surface area and landscape area. Fast Food establishment is a different land use than project being proposed which is a coffee/donut shop. Traffic impact analysis for project utilized different ITE land uses for calculations.

Construction Phase - No demolition required. Site is presently vacant.

Mobile Land Use Mitigation - Creation of jobs from new businesses including convenience store, drive-through coffee shop and future retail. The intersection of Country Club Drive and Adell Street will be improved with pedestrian access striping. The sidewalk along Adell Street will be constructed to City standards, improving pedestrian network and accessibility. Country Club Drive will have a traffic median installed. Nearest bus stop is 0.2 miles from the project site.

Energy Mitigation - https://www.energy.ca.gov/sites/default/files/2020-03/Title\_24\_2019\_Building\_Standards\_FAQ\_ada.pdf

Waste Mitigation -

Vehicle Trips - Daily trips based off of traffic impact analysis of traffic impacts derived from project.

Landscape Equipment -

1.3 User Entered Comments & Non-Default Data

Page 2 of 26

#### Country Club Commercial - Madera County, Winter

#### Project Characteristics -

Land Use - Square feet and acreage calculations based on site plan provided by applicant. Parking lot land use includes paved surface area and landscape area. Fast Food establishment is a different land use than project being proposed which is a coffee/donut shop. Traffic impact analysis for project utilized different ITE land uses for calculations.

Construction Phase - No demolition required. Site is presently vacant.

Mobile Land Use Mitigation - Creation of jobs from new businesses including convenience store, drive-through coffee shop and future retail. The intersection of Country Club Drive and Adell Street will be improved with pedestrian access striping. The sidewalk along Adell Street will be constructed to City standards, improving pedestrian network and accessibility. Country Club Drive will have a traffic median installed. Nearest bus stop is 0.2 miles from the project site.

Energy Mitigation - https://www.energy.ca.gov/sites/default/files/2020-03/Title\_24\_2019\_Building\_Standards\_FAQ\_ada.pdf

Waste Mitigation -

Vehicle Trips - Daily trips based off of traffic impact analysis of traffic impacts derived from project.

Landscape Equipment -

## COUNTRY CLUB COMMERCIAL CENTER TRAFFIC IMPACT ANALYSIS

#### **EXECUTIVE SUMMARY**

**Project Description.** This study evaluates the traffic impacts associated with the Country Club Commercial Center project located in the City of Madera. The site is located in the southeast quadrant of the Country Club Drive / Adell Street intersection adjacent to the Tractor Supply Company building. The proposed project will construct a mixed-use site consisting of a 12-position gas station with 4,000 square foot convenience store and a 5,800 square foot retail center; 2,200 square feet of the retail center is identified as a coffee shop with drive-through window while the remaining 3,600 square feet is identified as future retail space. Access to the project will be from an existing shared driveway along Country Club Drive which currently provides access to Tractor Supply, and two new driveways along Adell Street. The existing shared driveway will be limited to right-in, right-out movements with the completion of this project. The project is expected to generate approximately 4,405 daily trips, 349 a.m. peak hour trips and 310 p.m. peak hour trips. After accounting for pass-by and internal trips the site is projected to generate 1,284 new daily trips, 76 new a.m. peak hour trips and 105 new p.m. peak hour trips.

**Existing Conditions**. All intersections will operate within accepted City of Madera LOS thresholds; however, the Country Club Drive / Adell Street intersection will meet the peak hour signal warrant. While the peak hour signal warrant is met, the meeting of a signal warrant does not necessitate installation of a traffic signal. As the intersection operates acceptably, no recommendations are made.

#### **Existing Plus Project Conditions.**

<u>Vehicle Miles Traveled.</u> The proposed project is a local serving 9,800 square foot mixed-use site consisting of a 12-position gas station with 4,000 square foot convenience store and a 5,800 square foot retail center; 2,200 square feet of the retail center is identified as a coffee shop with drive-through window while the remaining 3,600 square feet is identified as future retail space. As noted in the *Technical Advisory on Evaluating Transportation Impacts in CEQA* local serving retail projects are presumed to have a less than significant transportation impact.

<u>General Plan Consistency</u>. All intersections except the Country Club Drive / Adell Street will operate within accepted City of Madera LOS thresholds. This intersection will operate at LOS E along Adell Street in the a.m. peak hour. While the peak hour signal warrant is met, the meeting of a signal warrant does not necessitate installation of a traffic signal.

The following recommended improvements are presented:

- Adell Street is identified in the General Plan as a collector street. The City's Collector Street standard cross section includes two through lanes and a center turn lane. The existing Adell Street approach includes a single left-through lane. The project should

install frontage half-street improvements and restripe Adell Street to include the separate westbound left and right turn lanes. This will improve the intersection to LOS C conditions.

- The project shall contribute its fair share to the cost of circulation improvements via the existing Citywide traffic impact mitigation (TIM) fee program.

**Existing plus Approved Projects (EPAP) Conditions.** All intersections will continue to operate within accepted City of Madera LOS thresholds. The Country Club Drive / Adell Street intersection will continue to meet the peak hour signal warrant. As the intersection operates acceptably, no recommendations are made.

## EPAP Plus Project Conditions.

<u>General Plan Consistency</u>. The Country Club Drive / Adell Street will operate at LOS E, below the City's LOS threshold. As identified in the Existing plus Project conditions, the installation of the half-street improvements and restriping of Adell Street to include westbound left and right turn lanes at Country Club Drive will continue to maintain LOS C conditions at the Country Club Drive / Adell Street intersection. No additional recommended improvements are identified.

**2042 Conditions.** All intersections will continue to operate within accepted City of Madera LOS thresholds. The Country Club Drive / Adell Street intersection will continue to meet the peak hour signal warrant. As the intersection operates acceptably, no recommendations are made.

## 2042 Conditions with Project.

<u>General Plan Consistency</u>. The Country Club Drive / Adell Street will operate at LOS E, below the City's LOS threshold. As identified in the Existing plus Project conditions, the installation of the half-street improvements and restriping of Adell Street to include westbound left and right turn lanes at Country Club Drive will continue to maintain LOS C conditions at the Country Club Drive / Adell Street intersection. No additional recommended improvements are identified.

## COUNTRY CLUB COMMERCIAL CENTER TRAFFIC IMPACT ANALYSIS

#### **INTRODUCTION**

#### **Study Purpose and Objectives**

This study evaluates the traffic impacts associated with the **Country Club Commercial Center** project located in the City of Madera. The site is located in the southeast quadrant of the Country Club Drive / Adell Street intersection adjacent to the Tractor Supply Company building. The proposed project includes a 12-position gas station with a 4,000 square foot convenience store and a 5,800 square foot retail center; 2,200 square feet of the retail center is currently identified as a coffee shop with drive-through window while the remaining 3,600 square feet is identified as future retail space. The report analyzes one existing intersection, Country Club Drive at Adell Street, the northern driveway access to Tractor Supply Company along Country Club Drive, and two new driveways to the project along Adell Street.

The study parameters are consistent with City of Madera guidelines. The study addresses the following traffic scenarios:

- 1. Existing AM and PM Peak Hour Traffic Conditions;
- 2. Existing Plus Project AM and PM Peak Hour Traffic Conditions;
- 3. Existing plus Approved Projects (EPAP) Traffic Conditions;
- 4. EPAP Plus Project Traffic Conditions;
- 5. Cumulative Year 2035 Conditions without Project; and
- 6. Cumulative Year 2035 Conditions with Project.

The objective of this study is to identify what effects the project will have on the area roadway network and local intersections.

## **Project Description**

The Country Club Commercial Center project includes a 12-position gas station with 4,000 square foot convenience store and an 5,800 square foot retail center which includes a coffee shop with drive-through window. The project will have access from the street system at three driveways. These include two new driveways along Adell Street and the existing driveway on the north side of the Tractor Supply Company site along Country Club Drive; this existing driveway will become a shared driveway. The project will extend the existing median along Country Club Drive to allow only right-in, right-out movements. The location of the project is illustrated in Figure 1 while Figure 2 presents the proposed site plan for the project.

figure 1

figure 2

Transportation Engineers 4509-01 RA 9/23/2020

## **EXISTING SETTING**

## Study Area

This study addresses traffic conditions on the adjacent roadways that will be used to access the site and a review of the site plan. The text that follows describes these facilities.

## Intersections

The quality of traffic flow is often governed by the operation of the local intersections. For this study one existing intersection and one driveway were evaluated. The study locations include:

The **Country Club Drive** / **Adell Street intersection** is a minor leg stop controlled tee intersection. Country Club Drive is identified as an arterial roadway in Madera while Adell Street is a collector road. The northbound approach includes a through lane and a shared through-right turn lane while the southbound approach includes a left turn lane and two through lanes. Marked crosswalks are not present in the intersection.

The **Country Club Drive / Tractor Supply Company (TSC) driveway** is stop controlled along the driveway approach. Northbound Country Club Drive includes a through lane and a shared through-right lane while the southbound approach includes a two-way left-turn-lane (TWLTL) north of the TSC driveway. This TWLTL is used for left turning vehicles to enter the site. A raised median is present beginning at the north end of the driveway and extends about 260' south. While it inhibits left turning outbound TSC traffic some motorists turn right and make an immediate U-turn directly north of the island.

#### Alternative Transportation Modes

*Madera Area Express (MAX)* provides fixed route service along two routes in the City of Madera. Route 1 serves primarily areas east of SR 99 and southwest Madera while Route 2 serves primarily areas west of SR 99 and a portion of southeast Madera. The closest stops are along Route 1 where the route travels through the Country Club Drive / Sherwood Way intersection and the Adell Street / Sonora Street intersection; both intersections are about ½ mile from the project site. The route operates Monday through Saturday. Madera Dial-A-Ride service is a demand-response system and is available weekdays between 7:00 a.m. and 6:30 p.m. and Saturdays between 9:00 a.m. and 4:00 p.m. Sunday service is also available between 8:30 a.m. and 2:30 p.m.

## Pedestrian / Bicycle Circulation

Facilities that are dedicated to pedestrians and bicycles vary within the City of Madera. Pedestrian facilities can be found in residential and commercial areas. In the project vicinity, sidewalks are present along Country Club Drive; however, sidewalk is not present along Adell Street from Country Club Drive through Owens Street. The city is adding bike facilities annually to the transportation system. In the project vicinity, though, there are currently no marked bike lanes or bike paths.

**Vehicle Miles Traveled (VMT) Significance Threshold.** The CEQA Guidelines and the California Governor's Office of Planning and Research (OPR) document *Technical Advisory on Evaluating Transportation Impacts in CEQA* (California Governor's Office of Planning and Research 2018) encourage all public agencies to develop and publish thresholds of significance to assist with determining when a project would have significant transportation impacts based on the new metric of VMT, rather than operating Level of Service (LOS). The CEQA Guidelines generally state that projects that decrease VMT can be assumed to have a less than significant transportation impact. The CEQA Guidelines do not provide any specific criteria on how to determine what level of project VMT would be considered a significant impact.

Certain types of projects as identified in statute, the CEQA Guidelines, or in OPR's Technical Advisory are presumed to have a less than significant impact on VMT and therefore a less than significant impact on transportation. Generally, the identified projects contribute to efficient land use patterns enabling higher levels of walking, cycling, and transit as well as lower average trip length. These projects include, for example, projects in transit priority areas, projects consisting of residential infill or those located in low VMT areas.

Caltrans references OPR's December 2018 *Technical Advisory on Evaluating Transportation Impacts in CEQA*, which identifies projects and areas presumed to have a less than significant transportation impact. Those include:

1. Residential, office, or retail projects within a Transit Priority Area, where a project is within a  $\frac{1}{2}$  mile of an existing or planned major transit stop or an existing stop along a high-quality transit corridor.

a. A major transit stop is defined as a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods (Pub. Resources Code, § 21064.3).

b. A high-quality transit corridor is defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours (Pub. Resources Code, § 21155).

2. An area pre-screened by an agency as having low residential or office VMT:

a. An area where existing residential projects exhibit VMT per capita 15 percent or more below city or regional average.

b. An area where existing office projects exhibit VMT per capita 15 percent or more below regional average.

3. Residential projects composed of 100 percent or near-100 percent affordable housing located in any infill location. Additionally, per OPR's Technical Advisory, "Lead agencies may develop

their own presumption of less than significant impact for residential projects (or residential portions of mixed use projects) containing a particular amount of affordable housing, based on local circumstances and evidence. Furthermore, a project which includes any affordable residential units may factor the effect of the affordability on VMT into the assessment of VMT generated by those units."

4. A locally-serving retail project (such a project typically reduces vehicle travel by providing a more proximate shopping destination, i.e., better accessibility).

5. Mixed-use projects composed entirely of the above low-VMT project types.

6. In any area of the state, absent substantial evidence indicating that a project would generate a potentially significant level of VMT, or inconsistency with a Sustainable Communities Strategy (SCS) or general plan, projects that generate or attract fewer than 110 trips per day generally may be assumed to cause a less-than significant transportation impact.

However, a land use project near transit may have a significant impact on VMT if it:

- 1. Has a floor area ratio less than 0.75.
- 2. Includes more parking than required by the local permitting agency.
- 3. Is inconsistent with the region's Sustainable Communities Strategy (i.e., development is outside region's development footprint, or in area specified as open space).
- 4. Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

Should a project not meet the minimum screening thresholds a VMT analysis should be conducted. The OPR *Technical Advisory on Evaluating Transportation Impacts in CEQA* (California Governor's Office of Planning and Research 2018) identifies a threshold of 15 percent below the baseline for determining the significance of VMT impacts associated with residential and office land use developments. OPR suggests that retail development including stores larger than 50,000 square feet might be considered regional-serving, and lead agencies should consider undertaking an analysis to determine whether the project might increase or decrease VMT.

The VMT analysis presented in this traffic impact study is not intended to pre-empt either the City or MCTC process of developing and adopting VMT guidelines. Rather, the analysis presented in this traffic impact study is intended to be a good-faith effort at disclosing and identifying the VMT impacts of the Country Club Commercial Center project based on currently available data and guidance.

## Level of Service Analysis

**Methodology.** Level of Service Analysis has been employed to provide a basis for describing existing traffic conditions and for project traffic impacts relative to General Plan consistency. Level of Service measures the *quality* of traffic flow and is represented by letter designations from "A" to "F", with a grade of "A" referring to the best conditions, and "F" representing the worst conditions. Table 1 presents typical Level of Service characteristics.

Local agencies adopt minimum Level of Service standards for their facilities. The City of Madera identifies LOS 'C' as the acceptable Level of Service within the City. The *Highway Capacity Manual* 6<sup>th</sup> *Edition* was used to provide a basis for describing existing traffic conditions and for evaluating the impact of project traffic on the surrounding area.

The Highway Capacity Manual  $\delta^{th}$  Edition presents methodologies for calculating Level of Service at intersections. At signalized intersections and intersections controlled by all-way stop signs, traffic conditions are described in terms of the average length of the delays experienced by all motorists. Intersection configuration, traffic volumes and traffic signal timing are all factors that enter into determination of the length of average delay and the resulting Level of Service. For unsignalized intersections level of service is based on the worst delay of all the controlled movements.

Various software programs have been developed to assist in calculating intersection Level of Service, and the level of sophistication of each program responds to factors that affect the overall flow of traffic. For this project, Synchro software was used to analyze the intersections.

Level of Service			
Service	Signalized Intersection	Unsignalized Intersection	Roadway (Daily)
"A"	Uncongested operations, all queues clear in a single-signal cycle. Delay $\leq 10.0$ sec	Little or no delay. Delay $\leq 10$ sec/veh	Completely free flow.
"B"	Uncongested operations, all queues clear in a single cycle. Delay $> 10.0$ sec and $\le 20.0$ sec	Short traffic delays. Delay > 10 sec/veh and $\leq$ 15 sec/veh	Free flow, presence of other vehicles noticeable.
"C"	Light congestion, occasional backups on critical approaches. Delay > 20.0 sec and $\leq 35.0$ sec	Average traffic delays. Delay > 15 sec/veh and $\leq$ 25 sec/veh	Ability to maneuver and select operating speed affected.
"D"	Significant congestion of critical approaches but intersection functional. Cars required to wait through more than one cycle during short peaks. No long queues formed. Delay > $35.0 \text{ sec}$ and $\leq 55.0 \text{ sec}$	Long traffic delays. Delay > 25 sec/veh and $\leq$ 35 sec/veh	Unstable flow, speeds and ability to maneuver restricted.
μEn	Severe congestion with some long standing queues on critical approaches. Blockage of intersection may occur if traffic signal does not provide for protected turning movements. Traffic queue may block nearby intersection(s) upstream of critical approach(es). Delay > 55.0 sec and $\leq 80.0$ sec	Very long traffic delays, failure, extreme congestion. Delay > 35 sec/veh and $\leq$ 50 sec/veh	At or near capacity, flow quite unstable.
"F"	Total breakdown, stop-and-go operation. Delay > 80.0 sec	Intersection blocked by external causes. Delay > 50 sec/veh	Forced flow, breakdown.

The intersection Levels of Service presented in this analysis are based on the weighted average total delay per vehicle for the intersection as a whole at signalized intersections and at locations controlled by all-way stops. The average delay experienced by motorists yielding the right of way is the basis for identification of Level of Service at locations controlled by side street stop signs.

The City of Madera seeks to maintain a Level of Service 'C' at all times on all roadways and intersections in the City with the following exceptions:

- a) On arterial roadways or roadways with at-grade railroad crossings that were experiencing congestion exceeding LOS C during peak hour travel times as of the date the General Plan Update is adopted the City shall seek to maintain LOS D or better.
- *b) The city policy does not extend to freeways (where Caltrans policies apply) or to private roadways.*

## c) In the Downtown District (as defined in the Land Use Element of the General Plan) the City shall seek to maintain LOS D.

#### **Existing Traffic Conditions**

Traffic Impact Analysis for

Existing a.m. and p.m. traffic volumes were counted in March 2020 while school was still in session. These volumes were used to analyze the existing condition scenario. The intersection volumes are shown in Figure 3.

Intersection Levels of Service. The Level of Service for the study intersections is based on and measured in terms of control delay for the peak fifteen-minute analysis period. Table 2 summarizes current Levels of Service at the study intersections during the a.m. and p.m. peak hour. As noted earlier, westbound left turn access from the Tractor Supply Company (TSC) driveway onto southbound Country Club Drive is inhibited by the raised median island; however, vehicles were still noted driving north and making a guick U-turn around the end of the median. The Country Club Drive / Adell Street intersection currently operates at LOS C along the Adell Street approach while the Country Club Drive / TSC driveway operates at LOS B. Both intersections operate above the City's LOS D threshold.

Traffic volumes at both intersections were evaluated to determine if the peak hour traffic signal warrant, published in the CA MUTCD was met. The warrant is frequently the first warrant that can be met to determine if an intersection should be signalized. The Country Club Drive / Adell Street intersection was analyzed under the Peak Hour 70% Factor as the posted speeds at the intersection change from 40 mph to 45 mph northbound and 45 mph to 40 mph southbound. The Country Club Drive / TSC driveway was analyzed under the Peak Hour warrant as the driveway is within a posted speed of 40 mph. While operating at acceptable levels of service, the Country Club Drive / Adell Street intersection currently meets the peak hour warrant under both a.m. and p.m. conditions.

figure 3

## **PROJECT IMPACTS**

## **Trip Generation**

The development of this project will attract additional traffic to the project site. The amount of additional traffic on a particular section of the street network is dependent upon two factors:

- <u>Trip Generation</u>, the number of new trips generated by the project, and
- <u>Trip Distribution and Assignment</u>, the specific routes that the new traffic takes.

Trip generation is determined by identifying the type and size of land use being developed. Recognized sources of trip generation data may then be used to calculate the total number of trip ends.

The trip generation of the project was computed using trip generation rates published in *Trip Generation* (Institute of Transportation Engineers, 10th Edition, 2017) based on the projected uses.

The proposed project will construct a mixed-use site consisting of a 12-position gas station with 4,000 square foot convenience store and a 5,800 square foot retail center; 2,200 square feet of the retail center is identified as a coffee shop with drive-through window while the remaining 3,600 square feet is identified as future retail space. The Institute of Transportation Engineers (ITE) publishes trip generation rates for a variety of land uses including gas stations with convenience stores and various retail uses. Since the 3,600 square foot portion of the commercial building is unknown as to proposed retail uses, the shopping center land use (LU 820) was used to develop retail trips. Table 3 presents the trip generation for the proposed project. The project is projected to create 4,405 daily trips, 349 a.m. peak hour trips and 310 p.m. peak hour trips. After accounting for pass-by trips, trips that are already in the roadway network, the site will generate 1,284 new daily trips, 76 new a.m. peak hour trips and 105 new p.m. peak hour trips.

Motor vehicle trips generated by commercial projects fit into two categories. Some trips will be made by patrons who would not otherwise be on the local street system and who go out of their way to reach the site. These are "New" trips. Other trips will be made by patrons who are already in the roadway network and are therefore not adding "new" trips to the overall system. "Pass-by" trips would be made by motorists who are already driving by the site as part of another trip. For example, peak hour pass-by trips are common on commuter routes as motorists stop on their way home to get gasoline for their vehicle.

A reduction of new trips was also considered based on 'internally captured' trips. A characteristic of mixed-use development is that trips between the various land uses can be made on the site, and none of these internal trips are made on the major street system. It is reasonable to assume that some trips will be made between the gas station and retail uses on the site. An internal capture rate is generally defined as a percentage reduction that is applied to trip generation estimates for individual land uses to account for the trips internal to the site. The Caltrans rate of 5% was used for internal reduction.

Page 11

ITE research has suggested typical "pass-by" percentages for various retail land uses where appreciable background traffic occurs. The share of project trips falling into each category can vary over the day. Table 3 presents the "pass-by" reductions and internally captured used for this study. Application of these rates yields 2,901 daily 'pass-by' trips, 255 'pass-by' a.m. peak hour trips and 189 'pass-by' p.m. peak hour trips. Internal trips are projected to account for 220 daily trips, 17 a.m. peak hour trips and 15 p.m. peak hour trips. After accounting for this traffic, the project is expected to generate 1,284 new daily trips, 76 new a.m. peak hour trips and 105 new p.m. peak hour trips.

## Trip Distribution / Assignment

The distribution of project traffic was determined based on review of existing traffic counts and the travel patterns in the area relative to the land use. Table 4 presents the projected trip distribution. Traffic generated by the project is shown in Figure 4. This traffic was then added to existing peak hour volumes based on the distribution percentages. Figure 5 displays the Existing plus Project generated traffic anticipated for each study intersection in both a.m. and p.m. peak hours.

TABLE 4 PROJECT TRIP DIS	I TRIBUTION	
	Distri	bution
Route	AM	РМ
South on Country Club Drive	50%	45%
North on Country Club Drive	40%	40%
East on Adell Street	10%	15%
Total	100%	100%

## **Existing Plus Project Level of Service Impacts**

**Vehicle Miles Traveled**. The proposed project is a local serving 9,800 square foot mixed-use site consisting of a 12-position gas station with 4,000 square foot convenience store and a 5,800 square foot retail center; 2,200 square feet of the retail center is identified as a coffee shop with drive-through window while the remaining 3,600 square feet is identified as future retail space. As noted in the *Technical Advisory on Evaluating Transportation Impacts in CEQA* local serving retail projects are presumed to have a less than significant transportation impact.

**Intersection Levels of Service.** Table 5 displays the a.m. and p.m. peak period Level of Service at each study intersection with the proposed project. Under project conditions the Country Club Drive / Adell Street intersection will decline to LOS E along the westbound Adell Street approach in the a.m. peak hour; this the result of a low peak hour factor likely related to traffic to and from the local schools east of the project site. The remaining intersections will operate at LOS C or better during both peak periods.

Each study location was evaluated to determine if the peak hour traffic signal warrant was met. This warrant is often the first warrant met and can provide an indication of whether a traffic signal may be required at the intersection. The Country Club Drive / Adell Street intersection will continue to meet the peak hour warrant under both a.m. and p.m. conditions. All other locations do not meet the peak hour warrant.

Traffic Impact Analysis for Country Club Commercial Center, Madera, CA (September 29, 2020)

Page 16 KDA

## EXISTING PLUS APPROVED PROJECTS [EPAP]

The analysis of the near-term cumulative condition is intended to consider the impact of projects that are approved or are reasonably foreseeable. This is referred to as the "Existing Plus Approved Projects" (EPAP) scenario. Madera staff was contacted to identify approved or pending projects. The only project identified is a 61-lot subdivision in the southwest corner of D Street and Ellis Street and N. D Street. After accounting for this project, the EPAP intersection volumes are shown in Figure 6.

**Intersection Levels of Service**. Table 6 summarizes Levels of Service at the study intersections during the EPAP a.m. and p.m. peak hour. Westbound left turn access from the Tractor Supply Company (TSC) driveway onto southbound Country Club Drive is still assumed to occur, but no new traffic is assumed to make this movement. The Country Club Drive / Adell Street intersection will continue to operate at LOS C along the Adell Street approach while the Country Club Drive / TSC driveway operates at LOS B. Both intersections operate above the City's LOS D threshold.

Each study location was evaluated to determine if the peak hour traffic signal warrant. While operating at acceptable levels of service, the Country Club Drive / Adell Street intersection will continue to meet the peak hour warrant under both a.m. and p.m. conditions. The Country Club Drive / TSC driveway will not meet the peak hour warrant.

## EPAP Plus Project Level of Service Impacts

**Intersection Levels of Service.** Table 6 displays the a.m. and p.m. peak period Level of Service at each study intersection with the proposed project. Under project conditions the Country Club Drive / Adell Street intersection will operate at LOS E along the westbound Adell Street approach in the a.m. peak hour. The remaining intersections will operate at LOS C or better during both peak periods. The Country Club Drive / Adell Street intersection will continue to meet the peak hour warrant under both a.m. and p.m. conditions.

## **CUMULATIVE 2042 IMPACTS**

The analysis of Cumulative 2042 impacts is intended to consider the impact of this project within the context of future conditions under the City of Madera General Plan while also providing information regarding other reasonably foreseeable development proposals. Cumulative 2042 traffic volumes and lane configurations presented herein are based on information derived from the Madera County Transportation Commission (MCTC) travel demand model.

## Cumulative 2042 Traffic Conditions

**Basis for Analysis - Regional Traffic Growth.** The most recent MCTC regional travel demand forecasting model was used as the basis for developing future 2042 volume forecasts in the study area. The differential method was used to develop segment volumes. The differential method was used to develop peak hour segment throughout the project area. This method adds the difference between the cumulative 2042 and baseline 2020 model results to the existing traffic conditions. The study intersection turning movements were then balanced using the techniques described in the Transportation Research Board's (TRB's) National Cooperative Highway Research Program (NCHRP) Report 255, *Highway Traffic Data for Urbanized Area Project Planning and Design*. The NCHRP 255 method applies the desired peak hour directional volumes to the intersection turning movement volumes, using an iterative process to balance and adjust the resulting forecasts to match the desired peak hour directional volumes. Figure 8 presents the projected intersection turning movement volumes in Year 2042.

**Roadway Improvements.** The General Plan identifies Adell Street as a collector street. The City's collector street standard includes two through lanes in each direction and a center turn lane. The most recent Capital Improvement Program identifies two underground utility projects along Adell Street, and there is no identified project in the CIP or the General Plan identifying the widening of Adell Street. Therefore, it is assumed that no roadway improvements will be completed by 2042.

**Intersection Levels of Service.** Future growth in Madera will generally increase traffic volumes along the study roadways. Table 7 displays the a.m. and p.m. peak hour Levels of Service at each study intersection in the Cumulative 2042 "no project" condition. All intersections are projected to operate within the City's LOS threshold. The Country Club Drive / Adell Street intersection will continue to meet the peak hour warrant under both a.m. and p.m. conditions.

## Cumulative 2042 Plus Project Traffic Conditions

**Intersection Levels of Service.** Figure 9 presents the projected intersection turning movement volumes under the 2042 plus Project scenario. Table 7 displays the resulting a.m. and p.m. peak hour Levels of Service at each study intersection with the project. The Country Club Drive / Adell Street intersection will operate at LOS E along the westbound Adell Street approach in the a.m. peak hour and LOS D in the p.m. peak hour. The remaining intersections will operate at LOS C or better during both peak periods. The Country Club Drive / Adell Street intersection will continue to meet the peak hour warrant under both a.m. and p.m. conditions.

Traffic Impact Analysis for Country Club Commercial Center, Madera, CA

(September 29, 2020)

KDA
## IMPACT SUMMARY / MITIGATION MEASURES – RECOMMENDED IMPROVEMENTS

The preceding analysis has identified project impacts that may occur without mitigation or recommended improvements. The text that follows identifies a strategy for mitigating the impacts of the proposed project. Recommendations are identified for facilities that require mitigation but are not a result of the proposed project. If the project causes a significant inconsistency with the General Plan, recommended improvements are identified for the facility.

## **Existing Conditions**

All intersections will operate within accepted City of Madera LOS thresholds; however, the Country Club Drive / Adell Street intersection will meet the peak hour signal warrant. While the peak hour signal warrant is met, the meeting of a signal warrant does not necessitate installation of a traffic signal. As the intersection operates acceptably, no recommendations are made.

## Existing Plus Project Conditions

All intersections except the Country Club Drive / Adell Street will operate within accepted City of Madera LOS thresholds. This intersection will operate at LOS E along Adell Street in the a.m. peak hour. While the peak hour signal warrant is met, the meeting of a signal warrant does not necessitate installation of a traffic signal.

The following recommended improvements are identified:

- Adell Street is identified in the General Plan as a collector street. The City's Collector Street standard cross section includes two through lanes and a center turn lane. The existing Adell Street approach includes a single left-through lane. The project should install frontage half-street improvements and restripe Adell Street to include the separate westbound left and right turn lanes. This will improve the intersection to LOS C conditions.
- The project shall contribute its fair share to the cost of circulation improvements via the existing Citywide traffic impact mitigation (TIM) fee program.

## Existing plus Approved Projects (EPAP) Conditions

All intersections will continue to operate within accepted City of Madera LOS thresholds. The Country Club Drive / Adell Street intersection will continue to meet the peak hour signal warrant. As the intersection operates acceptably, no recommendations are made.

## EPAP Plus Project Conditions

The Country Club Drive / Adell Street will operate at LOS E, below the City's LOS threshold. As identified in the Existing plus Project conditions, the installation of the half-street improvements and restriping of Adell Street to include westbound left and right turn lanes at

Page 25

Country Club Drive will continue to maintain LOS C conditions at the Country Club Drive / Adell Street intersection. No additional recommended improvements are identified.

## 2042 Conditions

All intersections will continue to operate within accepted City of Madera LOS thresholds. The Country Club Drive / Adell Street intersection will continue to meet the peak hour signal warrant. As the intersection operates acceptably, no recommendations are made.

## 2042 Conditions with Project

The Country Club Drive / Adell Street will operate at LOS E, below the City's LOS threshold. As identified in the Existing plus Project conditions, the installation of the half-street improvements and restriping of Adell Street to include westbound left and right turn lanes at Country Club Drive will continue to maintain LOS C conditions at the Country Club Drive / Adell Street intersection. No additional recommended improvements are identified.
